Dear Friends and Fellow Gardeners

I am writing to you from our Floradale Farms where we grow most of our flower seeds and create new and better varieties for your gardens.

This year we are offering an unusual array of fine new flowers. Blaze Zinnia—the All America Winner—the best new flower for 1954, is on the front cover of this catalog. The new Marigolds, including Man-in-the-Moon (the nearest to white), are on the inside front cover. Then on page 16 there are the new Steeplechase heat resistant and the biggest of all Larkspurs, and on page 13 the new really Giant Heat Resistant Sweet Peas.

We have been developing new flowers to withstand the heat because so many of you live where summers are hot. Each year we continue our efforts to improve both flowers and vegetables for your gardens. Varieties created at Floradale are tested at Fordhook to make sure they will stand hot summers.

Most of our vegetable work is done on our Fordhook Farms in Pennsylvania and our Santa Paula Farms in California, and in Idaho.

The vegetables pictured on the back cover should be in every garden. If you like "Snap" Beans without fiber, tender and of the finest flavor, you will like the new Burpee Golden.

Big Boy already has become the most popular of all the Tomatoes we sell. It is a true first generation hybrid and always will be expensive, for to produce the seed we have to emasculate and then pollinate each Tomato blossom by hand.

The cost of your seeds is the smallest expense that goes into your gardens, and yet there is nothing so important as the quality of the seeds you sow. Good fertilizer, good tools and careful attention will not produce the best gardens for you unless the seeds you sow are the best.

My famous cousin, Luther Burbank, wrote me, "I consider your house the most reliable seed house in the world, and I think this would be the verdict of the public at large."

That reputation is our most valuable possession.

In the years to come we hope still further to improve vegetable and flower seeds for your gardens. In this catalog we offer you the best that are available for planting in 1954.

Wishing you success and happiness in all the years ahead,

Sincerely,

President

Burpee Offers \$10,000 for a pure white MARIGOLD

Among Your Own Plants of "MAN-IN-THE-MOON", Nature May Produce A WHITE One

This summer in your garden Nature may do what it might take us years to accomplish. For over twenty years Burpee's extensive marigold plant-breeding projects have included the quest for a white one; we have made great headway and Man-in-the-Moon is our best thus far. Just by chance, due to some favorable circumstance, one of your own Man-in-the-Moon plants may have flowers that are pure white.

Burpee will gladly pay \$10,000.00 in cash to the person from whom we first receive seeds that produce pure white marigolds as big as Man-in-the-Moon and as white as Burpee's Giant Fluffy White Aster or Snowstorm Petunia, as determined by a committee composed of the president of W. Atlee Burpee Co. and two other distinguished horticulturists. The decision of the majority of this committee shall be final.

This summer look for a white marigold in your garden, and if you find one, do not cut the flowers but let them go to seed. Send about 100 seeds addressed to us at Philadelphia, Pa., Clinton, Iowa or Riverside, Calif. postmarked any time before Jan. 1, 1955.

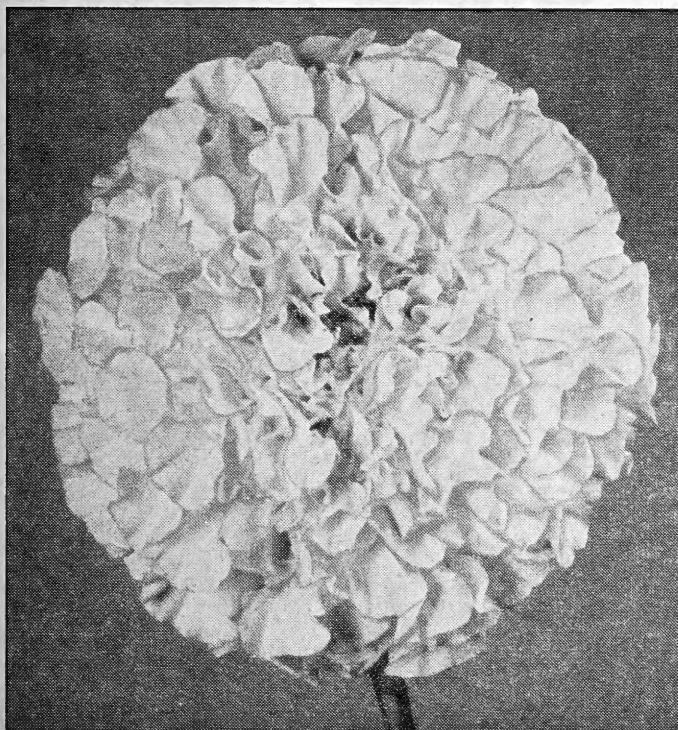

We will grow these marigold samples at our Floradale Farms in Calif. the summer of 1955 and will announce the results in our 1956 seed catalog.

Any seed sent to us is to become the property of W. Atlee Burpee Co. with the exclusive rights to name, introduce and sell the new variety and no seed can be returned.

In this world-wide search for a pure white marigold, anyone, anywhere may submit seeds except employees or families of employees of W. Atlee Burpee Co.

It is distinctly understood that all seeds submitted for trial are accepted by us only under the above conditions. You should have a lot of fun looking for a white marigold and we hope you will win the \$10,000.00.

W. Atlee Burpee Co.

2208 Man-in-the-Moon

The nearest to white

The lightest of all yellow marigolds with exceptionally attractive, solid, round carnation-like flower heads composed of broad, crisply ruffled, taffeta-like, pale moon-yellow petals with much lighter highlights. The plants are vigorous and the strong stems are a decided asset in the garden and for cutting. An excellent variety in all respects—the nearest to white marigold that Burpee has produced. Flower size 3 to 3½ in.; plant height 3 ft.

Pkt. 25¢; $\frac{1}{16}$ oz. \$1.00; $\frac{1}{8}$ oz. \$1.85

Pkt. 25¢; $\frac{1}{16}$ oz. \$1.00; $\frac{1}{8}$ oz. \$1.85

2209 Smiles

An early blooming marigold with bright golden yellow flowers, 3 in. and more across, with wonderful substance. The graceful, loose-open, peony-like blooms are especially attractive because of their wax-like, broadly ruffled petals. Good keepers. Grow 3 ft. tall.

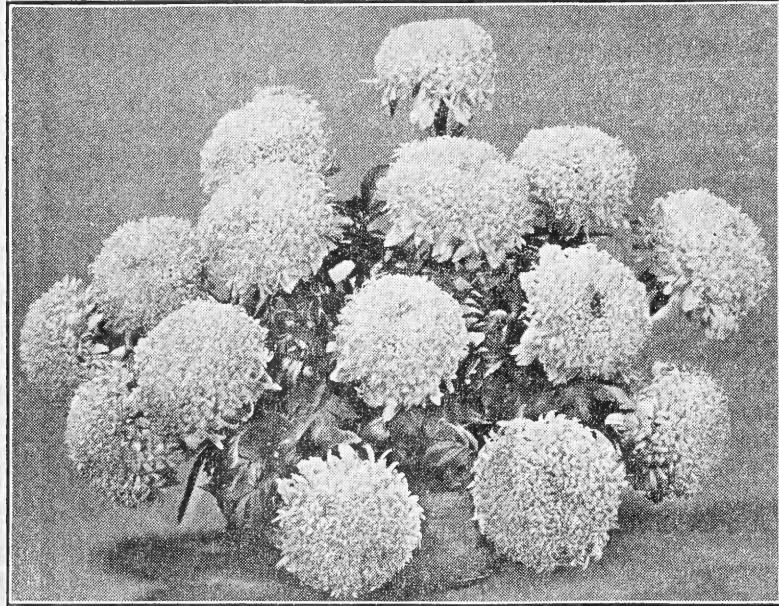

Pkt. 25¢; $\frac{1}{16}$ oz. \$1.00; $\frac{1}{8}$ oz. \$1.85

Burpee's Hybrid Marigolds

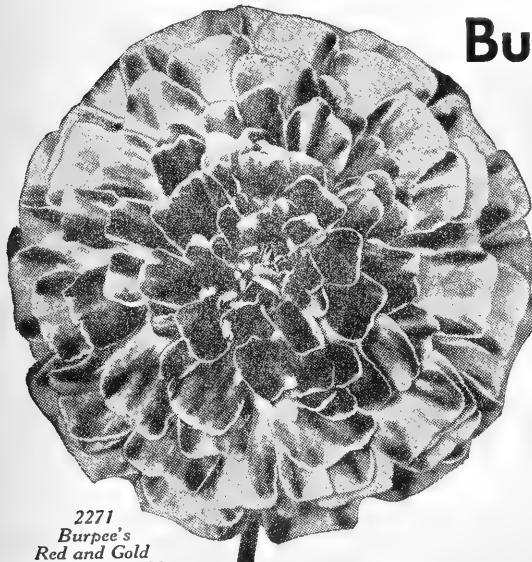

HYBRIDS BETWEEN AFRICAN AND FRENCH MARIGOLDS

2271 Burpee's Red and Gold Hybrids

Award of Merit, Royal Horticultural Society of Great Britain. Flowers of Burpee's Red and Gold Hybrids are exceedingly double, 2½ to 3 in. across, some are solid red while others are delightful combinations of red and gold. Color varies with the season—at times it becomes almost pure golden yellow and at other times a bright, rich mahogany-scarlet. The bushy, upright plants grow 1½ ft. tall, 2 ft. wide; come into flower in 8 weeks from seed and continue to bear profusely and continuously until the plants are killed by frost. Especially suited for borders and beds; prized for cut flowers and exhibition. Good keepers; last a long time when cut.

Burpee's Red and Gold Marigolds are hybrids between the African and French Marigolds and for this reason a few African Marigolds of an orange color may appear in any planting. These African Marigolds can be distinguished from the hybrids before the plants are ½ in. high by the green color of their stems; the hybrids have red stems. If any plants with green foliage appear in your planting, we suggest that you transplant them to a separate location. They usually grow taller than the hybrids, more bushy and with larger flowers.

BURPEEANA EXTRA EARLY ASTERS

1663 Burpeeana Extra Early Asters, growing for seed on Floradale Farms

Shown in color on inside back cover

1663 All Colors Mixed This new Burpee strain of asters is particularly noteworthy because of its desirable, uniformly upright, compact habit of growth; also because it comes into bloom extremely early. Flowers are globular, double, 3 to 4 in. across, with attractively incurved petals, ranging from snowy white through shell-pink, rose, crimson, blue, violet to purple—all the aster colors.

Plants are of erect, base branching growth, average 20 in. in height, with many stems per plant, each stem being unusually strong and topped with a flower somewhat resembling the American Beauty in shape. These terminal flowers come into bloom at about the same time, thus making a grand showing.

Burpeeana Early Asters, in many localities come into full bloom before aster wilt or aster yellows may make their appearance. In our plantings, these new asters reached the peak of their bloom two weeks or more earlier than Queen of the Market, with larger and better shaped flowers and longer, stronger stems.

Burpee's Early Asters

These very early flowering varieties begin to bloom soon after Burpeeana—flowers are of different shapes and the plants rather open in growth. Extreme earliness and good stems make them a most welcome type of aster for early cutting. All were created by Burpee on Floradale Seed Farms.

1607 Heavenly Blue Large, feathery, beautifully formed flowers, 4 in. and more across, of an exquisite azure or light lavender-blue color. Petals are long, narrow, prettily interlaced, the smaller ones gracefully curling over the center. Plants are of spreading growth, well branched, 2 ft. tall, bloom early; stems up to 16 in. long. Wonderful for cutting.

Pkt. 25¢; 1/8 oz. 85¢; 1/4 oz. \$1.50

1605 Early Bird First flowers appear very early and the plants will continue to produce their colorful carmine-rose flowers for several weeks. Blooms are double, 3 1/2 in. across, with the petals evenly placed to form a most symmetrical flower. Plants grow 15 in. and more high and branch freely. As flowers age, outer petals become tipped lighter rose.

Pkt. 25¢; 1/8 oz. 75¢; 1/4 oz. \$1.40

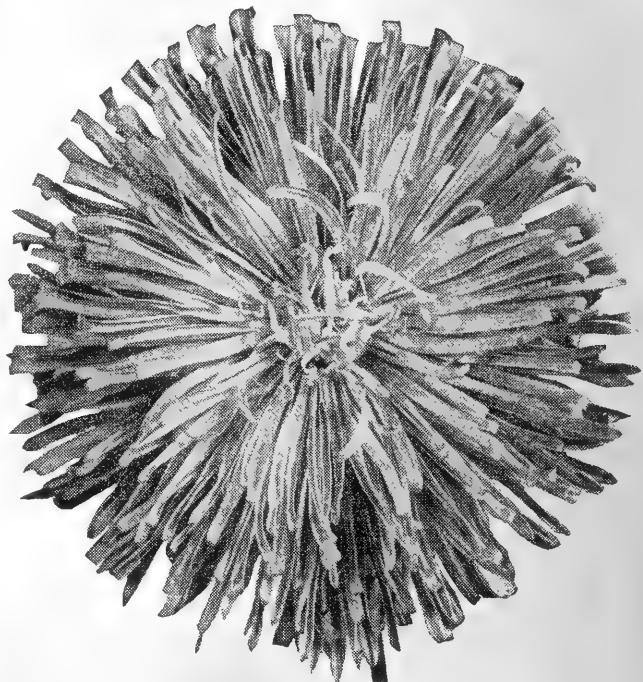

1603 Navy Blue *All-America Winner.* Large flowered aster; rather close in form to that of the Giant Crego type. The flowers grow about 4 in. in diameter, with long ribbon-like, beautifully curled, twisted and interlaced petals of a rich, luminous, deep velvety purple-blue color. 20 in. tall.

HOW TO GROW ASTERS

Asters are easy to grow. They prefer rich, well-drained soil and a warm, sunny location. For earliest blooms, sow seed indoors in boxes or seed-pans four to six weeks before your usual outdoor planting time. Set plants in the garden when weather gets warm. A continuous display of flowers from early summer until frost can be had by planting the new Burpeeana and other early, midseason and later blooming varieties. Asters have long lasting qualities, so are wonderful for cutting.

BURPEE'S GIANT PANSIES

Pansies always have been a great specialty with us and we are justly proud of our strains. Their wide range of colors, markings and forms, their easy culture, have made Burpee pansies universally popular. Pansies succeed best in fairly rich, well-drained soil in a sunny position, and produce their finest flowers in the cool, early days of spring. Keep flowers picked during the summer, plants pinched back, and you will get a nice lot of flowers again in the fall. Seeds may be sown outdoors when soil has become warm; for earlier blooms, start seed indoors or in a warm hotbed six to eight weeks before your usual outdoor planting time.

2513 Burpee Blend of Giant Fancy Pansies

Annual Flower Seeds

Annual flowers are those which grow, bloom, seed and die in one season. They are attractive in the garden—some for bedding, some for borders, some for rock gardens, some for climbing or trailing and others for their foliage effect only. Many are invaluable for cutting. To make selection easy for you, we have indicated with a symbol the principal purposes of different flowers. See explanation at left. There are annual flowers for every purpose; all are lovely and, with proper selection, blooms can be had from early summer until frost. We offer a wide and varied assortment on pages 2 to 49. Easy to follow, how-to-grow directions are given on every bag of Burpee seeds. Satisfaction guaranteed or your money refunded.

BURPEE'S NEW GIANT

Created on Burpee's Floradale Seed Farms

heat resistant SWEET PEAS

Tested over a period of years under the hot weather conditions experienced at Burpee's Fordhook Farms near Philadelphia

The picture at the right was taken of Burpee's Giant Heat Resistant Sweet Peas growing at Fordhook July 24, 1953. These seeds were planted on the same day and received exactly the same care and cultivation as the Giant Spencers, the Earlies and the Cuthbertsons. When this picture was taken the Burpee Giant Heat Resistant varieties were blooming profusely while the other varieties had long since ceased to flower. Valuable acquisition.

In the spring, there was an unusual amount of rain, followed by a dry spell with thermometer readings for many days in the nineties. Sweet Peas that can survive such unfavorable conditions and continue to produce large, long-stemmed flowers in profusion through July and into August must be good. Burpee Giant Heat Resistant did just that. If you live in a section where it has been almost impossible to grow giant sweet peas, try these new ones of Burpee's—they are wonderful.

Cuthbertson Spring Flowering Sweet Peas

EARLY FLOWERING SWEET PEAS

Burpee's Early Flowering Sweet Peas come into bloom outdoors before the summer heat arrives—usually 3 to 4 weeks earlier than the Burpee Giant varieties. They are valuable for winter flowering under glass, also especially adapted for growing in frost-free sections and for earliest blooms outdoors in the North. Sweet Peas do best in cool weather. If seed was not sown in the fall, sow as early in the spring as the ground can be prepared. All types of sweet peas prefer an open, sunny location, and deep, rich soil which must be well drained. Those listed below are the very choicest, large flowered varieties in a wide array of the best colors.

3349 **Burpee's Giant Pink** Lovely shade of rose-pink.
3302 **Burpee's Lavender** Exquisite light wisteria-lavender.
3387 **Burpee's White Giant** White-seeded pure white.
3307 **Crimson Banner** Excellent, large, ruffled and duplexed rosy crimson flowers borne in 3's and 4's on long, strong stems.
3328 **Helen Hayes** Appealing shade of soft salmon-pink.
3313 **Joyce Holden** Burpee's new glistening orange-scarlet, delicately waved, fluffy sweet pea which is as lovely as the motion picture actress for whom it was named. Showy and attractive.

3361 **Kate Smith** Unusually long-stemmed, large, well-formed bright scarlet flowers with slight suffusion of rose.
3320 **Merilee** Beautifully clear cherry-cerise flowers of large size, well placed on good, strong stems. Vigorous grower.
3365 **Mrs. Douglas MacArthur** Deep fawn-pink on a creamy white ground. Extra large, attractively waved flowers.
3306 **Pearl Buck** Rich rose standard with an orange tinge; wings are deep rose. The general effect is a most pleasing rose.
3330 **WAVES** Flowers are unusually large. Color is mid-blue.

MULTIFLORA SWEET PEAS

3597 **Mixed Colors** As the name indicates, the outstanding characteristic of this new class of sweet peas, which distinguishes them from other varieties, is that more flowers are borne to a stem when plants are well grown. Flowers are of medium size, stems are long and strong. The number of blooms to a stem seems to vary with the color—five, six and more under favorable conditions. Many of the flowers are strikingly waved. In color they range from pure white through shades of pink and rose, orange-cerise, lavender, etc. Plants are vigorous, free blooming, rather early; flowers are wonderful for cutting.

HYBRID PETUNIAS

True first generation (F₁) hybrids, the result of crossing two distinct parent varieties by hand pollination

Hybrid petunias are really outstanding, each seed is produced by carefully controlled crossing by hand of two distinct, parent lines. This is very costly but the resulting seed will produce a hybrid of extreme vigor, more uniform in growth, with larger flowers and considerably more of them per plant than either parent. We strongly urge that special care and attention be given to the sowing of the seed and the growing of the plants. Wonderful for beds, borders and excellent for cut flowers.

2486 Pink Sensation

All-America Bronze Medal Winner

Plants are extremely vigorous, 2 ft. tall, as much as 4 ft. in width, and completely covered with flowers, 3 in. across. The color is light rose-pink with deeper pink veining extending well out toward the edges from the white throat which is finely etched with brown. A metallic lustre adds life and sparkle. Hybrid vigor is surely evident in this lovely multiflora hybrid petunia.

Burpee's NASTURTIUMS

Ever popular plants of the easiest culture, blooming most profusely in ordinary, well-drained garden soil; if overly rich it will cause plants to produce more leaves than flowers. They are most useful plants for dry, sandy, or gravelly locations. Nasturtiums may be had in a great variety of shades and color combinations, single or double flowers and semi-tall or dwarf growing. Their varied colors, different shapes and refreshing fragrance make them most desirable for cutting. Few flowers ever introduced have been acclaimed so quickly and praised so highly as double nasturtiums. The ever popular Golden Gleam was the first double to be grown from seed. Since then we have created double nasturtiums in all the best colors.

Semi-Tall Giant Double Nasturtiums

Flowers are extra large, exquisitely sweet-scented, double and semi-double with eight or more petals; plants are semi-tall and splendid for beds, broad borders or as ground covers. May be trained upon strings or wire. Valuable for cutting, as flowers keep for a long time.

2328 Golden Gleam All-America Gold Medal Winner. Rich golden yellow, sweet-scented long-stemmed flowers. Profuse blooming.

2325 Loveliness The semi-double flowers are vivid salmon-cerise with pencilings of mahogany toward the base of the two upper petals.

2316 Burpee's Mahogany Extremely dark shade of deep velvety mahogany-red. Striking; unusual. Nice alone or with light shades.

2321 Orange Gleam Deep orange, with dark mahogany zone at base of the upper petals. Effective combination of these colors.

2326 Burpee's Scarlet Fiery, vivid orange-scarlet—the most brilliant in the tall double group. Large flowers in greatest profusion.

2313 Tigered Flowered Mixed Flowers are of many bizarre markings; some contrastingly blotched or mottled in the most strikingly different and irregular patterns. Unique and interesting.

Dwarf Giant Double Nasturtiums

Plants are of compact, bush or globular form, about 1 ft. high and 1 1/2 ft. across. The gorgeous, giant double and semi-double sweet-scented flowers are produced most freely on very long stems, which makes them especially fine for cutting. Eight or more irregularly placed petals give the blooms an unusually artistic appearance. Plants are uniformly dwarf, rounded and covered with flowers. Most attractive in beds, borders, edgings, rock gardens and pots. We offer a wide assortment of the best colors.

2338 Cherry Rose An exquisite shade of soft cherry-rose. Flowers grow 2 1/2 to 3 in. across and are produced early and most profusely.

2306 Delightful Soft salmon-cerise, upper petals oddly marked crimson-maroon at base. Flowers become deeper salmon-cerise with age.

2336 Garnet Gem Deep, rich, very bright garnet-red. The delightfully sweet-scented flowers have enough orange suffusion to enliven them with an iridescent glow that is most pleasing. Striking color.

2329 Golden Globe All-America Silver Medal Winner. Exquisite, giant double and semi-double, pure golden yellow blooms of great beauty.

2346 Mahogany Gem Darkest colored nasturtium we have ever seen; flowers are of a rich velvety, deep but brilliant mahogany.

Those offered on this page are extra large-flowered and double to the very center, except where noted. Calendulas are of easiest culture, succeeding in ordinary, well-drained soil and, where summers are not too hot, plants will bloom from early summer until frost and furnish an endless supply of long-lasting cut flowers. Sow seed in early spring. In hot sections, another sowing may be made in early summer to furnish blooms in the cool fall days. Plants grow 15 to 24 in. tall, depending on the variety and locality.

All Colors Mixed
Pkt. 40¢

**Snapdragons are one
of our leading specialties**

Included among our recent creations are Burpee's Tetra, the largest flowered of all snapdragons; Burpee's Double, the first giant alldouble snapdragon ever grown from seed; and Burpee's Giant Skyscraper, the tallest growing. All were originated on our Floradale Seed Farms in California.

Burpee Double Flowered

1614 All Colors Mixed Flowers are of an amazing formation, quite large, $1\frac{3}{4}$ in. across and $1\frac{1}{2}$ in. deep when well grown. The upper lip broadens and recurs gracefully. From the rounded portion of the lower lip there is a protruding flare which is slightly frilled. Between the lips, extending out from the throat, are several small, wavy accessory petals which add grace, charm and refinement. Color range is excellent. There are clear whites, creamy white, white with lavender suffusion, light yellow, bright yellow, golden yellow with some yellows flushed pink, rose-orange to scarlet-orange, lovely pinks from delicate salmon to deep rose, lavender, crimson, and bronze shades. Valuable for garden display and cutting. Height of the vigorous plants varies from 20 to 30 in.

Pkt. 40¢; 2 pkts. 75¢; $\frac{1}{32}$ oz. \$2.00; $\frac{1}{16}$ oz. \$3.75

1610 Burpee Double Flowers are rich, deep golden yellow throughout, except for the back of the buds which are flushed with rose-pink. When fully open, the pink coloring disappears entirely. The central spike grows about 28 in. tall and flowers first, followed by many lateral branches which come from the main stem near the base of the plant. All the lateral stems bloom at the same time so that the plants produce a great mass of color in beds or borders. Flowers are fragrant.

1612 Lemonade In addition to a new and pleasingly different form, the immense flowers are of a clear primrose-yellow and nicely placed on long, strong stems. The central spike grows 3 ft. tall and blooms ahead of the laterals, three to five of which arise from the main stems close to the ground. Frequently, the flower-spikes are more than half the height of the plants. Beautiful.

Burpee's Giant Skyscraper Snapdragons

1550 Mixed Colors Tallest growing of all snapdragons; more flowers per stem, the stems more upright, more rigid and the blooms of the most pleasing shades in the lighter tones — sulphur-yellow, primrose-yellow, canary yellow, sulphur-yellow flushed pink, golden yellow with rose tube, apple-blossom-pink, light rose-pink, mid-rose, rose flushed golden, pink delilah, creamy white, creamy white flushed pink with an occasional rosy orange, rosy bronze or lavender. Plants are base branching, with from 3 to 7 strong stems arising from the main stem close to the ground. The central spike grows 3 ft. and more tall followed by the lateral stems of the same or nearly the same height.

BURPEE'S TETRA SNAPDRAGONS

Giant Ruffled Tetraploid Snapdragons

ALL ORIGINATED ON BURPEE'S FLORADEALE FARMS

Tetra snaps are a Burpee scientific creation, originated through the treatment of the best regular or diploid varieties with colchicine—a drug or chemical derived from the bulbs of fall crocus. Genetically, they are known as tetraploids, for, when examined under the microscope, they have twice the number of chromosomes in their cells as the regular or diploid snapdragons.

Burpee's Giant Tetra Snapdragons are extremely large and attractively ruffled. Plants are exceptionally strong and husky, with glossy, dark green foliage, thick and almost leathery in texture; the stems are quite heavy. Under general field conditions the central spikes grow 2 ft. and more in height; these are surrounded by lateral spikes of lesser height. Plants are base branching so that long-stemmed flowers are assured for cutting; having good substance adds to their keeping value. Wherever seen, they are sure to demand admiration.

1561 Tetra Candlelight Clear, bright yellow, nicely formed, well placed flowers are freely borne on strong, erect spikes. Particularly rich and beautiful.

BLAZE

All America Winner
Best New Flower for 1954

2824 Blaze is a new color in Burpee Hybrids—the most distinctive and the most fascinating of all zinnias. So outstanding was Blaze in the All-American Selections, the judges voted it the winner and the only flower to receive an award for 1954. It is outstanding.

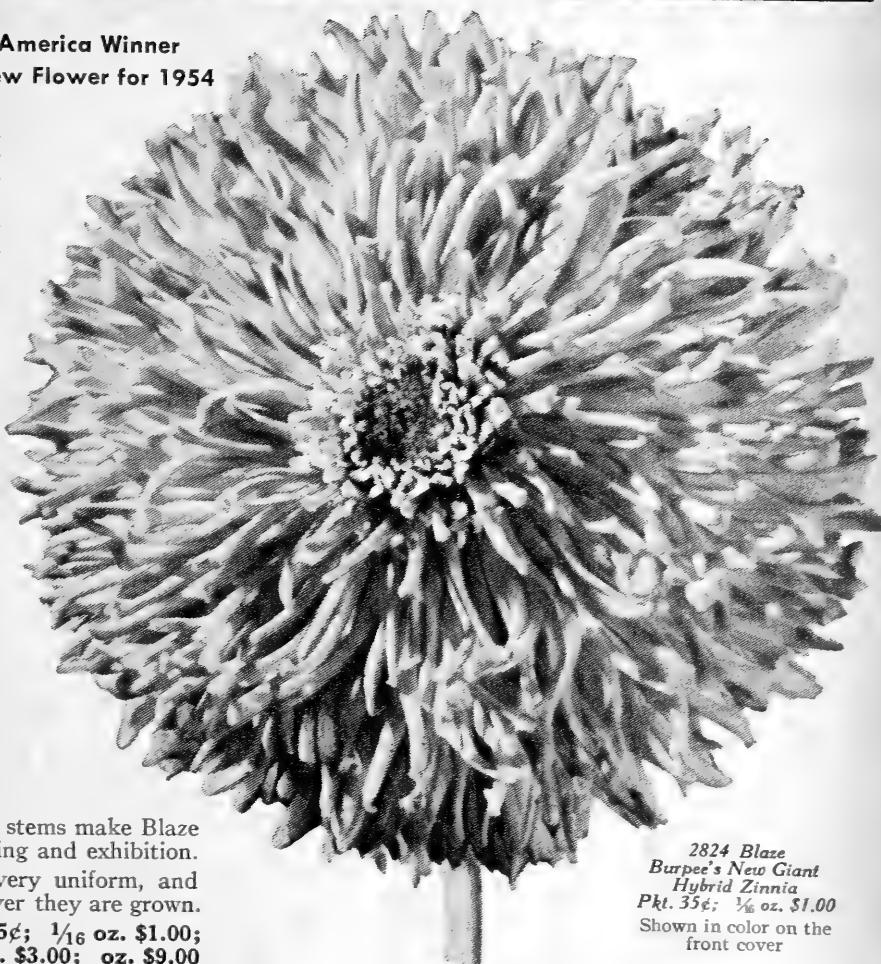

Blaze bursts into bloom with a profusion of brilliant mandarin-red flowers and, as the flowers attain size, change to an exciting fiery orange-scarlet—a color that will brighten any spot in your garden or home.

Garden writers, seedsmen and others who have seen Blaze zinnia praise it highly; and the amazing thing is that for all its size and vivid color, it retains the grace, delicacy and informality associated with Burpee's Giant Hybrids. It is a "must" for your garden.

The brilliant, rare coloring of flaming red and orange radiates from the informal, fluffy, quilled petaled, double flowers that grow 5 in. across. Good cutting stems make Blaze zinnia highly desirable for cutting and exhibition.

Plants are strong growing, very uniform, and sure to attract attention wherever they are grown.

BURPEE'S GIANT HYBRID ZINNIAS

Highly commended by the Royal Horticultural Society of Great Britain. The loveliest new flowers ever created. They include both first and second generation hybrids, grow 5 in. and more across, with a pleasing variation in petal formation, the majority being of the informal fluffy or ruffled type, some attractively curled, others gracefully quilled. The feathery, loosely arranged petals give the flowers an airy appearance, free of the stiffness often associated with other zinnias.

Their glistening beauty, stem length and keeping quality make them one of the most popular of all cut flowers. Plants are strong growing, free blooming, 2½ to 3 ft. tall and ideal for garden decoration.

Heavy spikes of handsome, fragrant flowers, like small rosettes, are produced in a wide range of soft and distinct shades. Fine for bedding, borders and cutting. For best results, sow seed indoors in shallow boxes or seed-pans 6 to 8 weeks before your usual outdoor planting time. Keep in a temperature of 65° F. or less from the time the seed is sown until the plants have made 8 leaves so that they will form buds. BURPEE PERENNIAL FLOWER SEEDS

Perennial flowers are the hardy, permanent ones that live for years. Plants grow to the flowering stage each year and die down again to the roots, which remain alive but dormant until the next season. Some perennials will flower the first year from seed if it is sown early, although two seasons are usually required before the plants produce their blooms. Sow seeds early so that you will have stronger plants to go through the winter and give more bloom the next spring and summer.

Cultural directions are given on every bag. With the perennials we have included the best of the biennials, seed of which is sown one year, the plants blooming the second season, after which they die.

AQUILEGIA—Columbine

Important—Please Read HYBRID TOMATOES

Hybrid Tomatoes are strong, vigorous growers and outyield regular varieties, the extra quantities coming, in large measure, from the soil. It can be readily understood that because Hybrid Tomatoes have the ability to produce larger plants and higher yield they must be fed more than standard tomatoes. Therefore, to produce a maximum crop of large fruits, we recommend that you maintain good fertility and moisture in your soil. For this purpose, it is desirable to make your fertilizer application at the time of planting and, if possible, cover the ground around the plants with well-rotted manure when plants begin to bloom or set their first fruit. Keep watered during dry spells.

Each hybrid tomato seed is produced by hand pollination which requires a great deal of work and entails a heavy expense. We strongly urge that special care and attention be given to the sowing of the seed and the growing of the crop. Extra care will repay you in better fruits and a bigger yield.

6113A BURPEE HYBRID

Has proved itself to be a valuable tomato of wide adaptation for the home garden, market grower, "green wrap," canning and long-distance shipping. Highly recommended.

Maturity Dates

The average number of days required from the time the seed is sown until vegetables are ready for use is given with each variety. Where plants must first be grown, such as Celery, Cabbage, Peppers, Tomatoes, etc., the number of days to maturity is from the time plants are set in the garden. Of course, the time is average, having been obtained over a period of years in our trial grounds under different conditions; some variation is to be expected, depending on the season, locality and time of sowing. The approximate maturity dates given will show the relative time when different varieties will be ready to use.

Burpee's Special Fordhook Strain

◎ Follow the Bull's Eye ◎

We have used this mark, ◎, for years to guide the gardener in the selection of vegetable varieties which we believe will give the best results under varied conditions of soil and climate. This mark, ◎, usually called a bull's eye, was used by the ancient alchemists to represent gold. It therefore is most appropriate for indicating the varieties which we consider the best of their class. If you are not thoroughly posted which varieties to choose as the most suitable for your particular section, we suggest that you make your selection from those marked with the bull's eye. They have been found most satisfactory throughout the country.

How to Grow Tomatoes

Sow seed in a hotbed, or in a shallow box in the house, allowing 6 to 8 weeks to produce plants large enough for setting outdoors when weather becomes warm. Light, friable soil of medium fertility is best for starting the seed. Cover seed with $\frac{1}{4}$ in. of fine soil or sand. Keep soil moist but not too wet and avoid excessive drying. If seed is sown in container, keep it in a warm place (65 to 70°). When seedlings are about 2 in. tall, transplant to stand 4 in. apart each way, or pot singly in 3 in. pots. Plant outdoors when all danger of frost is past in rows 3 to 4 ft. apart each way, if to be grown untrained and unpruned; if supported on stakes, plants may be set 18 to 24 in. apart in the row, except hybrids, which should be spaced 2 to 2 $\frac{1}{2}$ ft. apart in the row. Disturb roots as little as possible when transplanting.

Where summers are long, seed of standard varieties may be sown directly outdoors when soil and weather get warm. When plants are large enough to transplant, set them where they are to remain; such plants will come into bearing later than those started earlier indoors or in a hotbed. Sizes and weights mentioned in descriptions are for the general field-run of fruits; with special care they often do better than we state. A pkt. of standard tomato seeds will produce about 200 plants; 1 oz. 5000 to 6000.

Burpee's Jubilee Tomato

All-America Bronze
Medal Winner

Orange skinned, orange fleshed

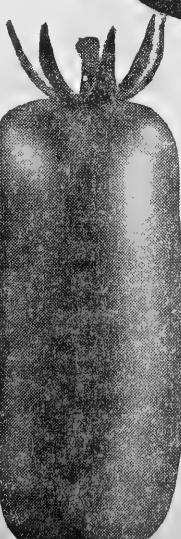

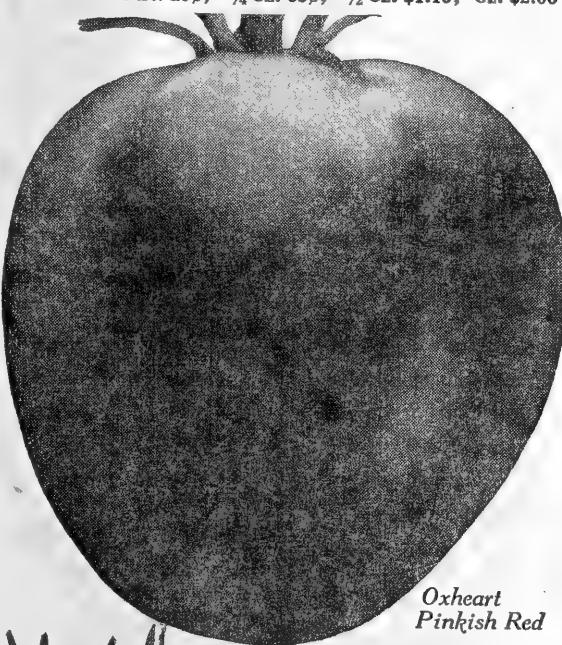

6122 Jubilee, originated by Burpee in 1943, compares favorably with the best of the standard red varieties in shape, smoothness, quality and solidity. Fruits are bright golden orange, deep-globular, $2\frac{1}{2}$ to $3\frac{1}{4}$ in. across, $2\frac{1}{4}$ to $2\frac{3}{4}$ in. in depth, heavy and really delicious; the orange colored interior is modern, thick-walled, with rather small seed cells and relatively few seeds. Most attractive when sliced and makes delicious juice. Very high in vitamins A and C. Nice if served alone or with red fleshed varieties. Being of mild but definite flavor and free of acidity, they are preferred by many to the best red tomatoes. If you have not enjoyed the delicious flavor and good eating qualities of Burpee's Jubilee, be sure to grow it this year. Fruits ready to use in about 72 days.

BROCCOLI Italian Green Sprouting

Most easily grown and delicious flavored vegetable for home, market and freezing. Plants are tall, erect and vigorous, 2½ ft. and more in height. They should be staked or given some other form of support.

Seeds sown in early spring outdoors will furnish heads in summer while sowings made in midsummer will provide for a late summer and fall crop. For the earliest crop, sow the seeds early in hotbed or house; transplant the young plants to the garden when soil has become warm. A pkt. will produce about 250 plants; an oz. 3000.

6007 Calabrese 85 days. The central large, cauliflower-like head of bluish green flower buds grows 5 or 6 in. in diameter and after being cut numerous smaller heads appear on the side branches over a long period. Be sure to keep green sprouts cut off before the flower buds open.

BRUSSELS SPROUTS

6006 Long Island Improved 120 days. Grown extensively on Long Island for the New York market and the most satisfactory variety for use throughout the U. S. Compact plants, 20 in. tall, with solid, round, cabbage-like sprouts measuring 1½ to 1½ in. in diameter with a more delicate flavor than cabbage. This is a splendid vegetable.

Brussels Sprouts are easy to grow. In the South, seeds may be sown in the spring; elsewhere, sow seed thinly in a specially prepared seedbed or coldframe before midsummer, allowing plenty of time for sprouts to mature before hard frosts; light frosts seem to improve the flavor. In about 30 to 35 days after the seed is sown plants should be big enough to transplant to the garden. Set them 18 in. apart in rows 3 to 4 ft. apart. The "sprouts," dark green, tightly folded, cabbage-like heads, appear along the central stalk at the joints of the leaves and appear first at the bottom of the plant. Therefore, the lowest sprouts on the plant should be picked each time, after which break off the leaves below the sprout to make further picking easier but do not remove the top leaves. Easily grown thus becoming more popular in home gardens. Suitable for freezing. A pkt. will produce about 250 plants; an oz. 3000.

CHICORY—Delicious, appetizing salad

5217 Witloof (French Endive) 110 days. Choice salad delicacy of mildly acid flavor for fall and winter. Sow seed in the spring. In early fall, cut off foliage 1 in. above soil level, cover the nubbins with 6 to 8 in. of soil and keep in place with boards set along the sides for four to six weeks when a pure white blanched stalk should be ready. Cut off about 1 in. above the top of the root and repeat as above for a second crop, or if wanted during the winter in cold sections, dig the roots, store for a few days in a shed or pit so they may become thoroughly chilled, then place upright in boxes and cover with 10 in. of sand, light soil or peat moss. Water and keep in a warm place indoors. In about a month, the sprouts should break through the surface and be ready for use as a tasty green.

Pkt. 20¢; ½ oz. 50¢; oz. 90¢

CORN SALAD—Lamb's Lettuce

5219 Large Leaved Round 60 days. Quick grower; fine for early spring, late fall or winter use. It is quite hardy, producing an abundance of gray-green rounded leaves which are sometimes served like lettuce but are better if mixed with more piquant "greens." May also be cooked like spinach or used for garnishing like parsley. Sow seeds outdoors in the spring when soil and weather have become thoroughly warm for early use and again in midsummer for use during the fall.

Pkt. 20¢; ½ oz. 50¢; oz. 85¢

COLLARDS—One of the best boiling "greens"

5215 Georgia 80 days. Erect, spreading 2 to 3 ft. plants with large, juicy, green leaves which are usually stripped from the plants as they mature thus providing delicious boiling "greens" of fine quality throughout the entire season. Will stand light freezing which improves the mild cabbage-like flavor of the leaves. Sow seeds outdoors in the spring when soil and weather have become thoroughly warm. *Seed crop is short.*

Pkt. 15¢; oz. 35¢; ¼ lb. \$1.00

CRESS—Easy, quick growing "green"

5216 Fine Curled (Pepper Grass) 40 days. Grows very quickly; is of the easiest culture. The finely cut, deep green leaves have a pleasing, pungent taste and are excellent for flavoring salads, garnishing, or as a "green" alone or with lettuce. Best if used when young. Sow seeds outdoors in the spring when soil and weather have become warm.

Pkt. 20¢; ½ oz. 40¢; oz. 70¢

5211 Water Cress 50 days. An appetizing, mildly pungent salad; also used for garnishing. Start seed in pots set in a pan of water and transplant seedlings into a shallow running stream of fresh water or grow in moist soil in a shady place and provide plenty of water. Extensively grown in greenhouses for market during winter and early spring.

Burpee's Earliest CABBAGE

Cabbage is easily grown and may be eaten raw as cole slaw or cooked in different ways. While the smooth leaved varieties are the most popular, some prefer the green savoy crumpled leaved (Perfection Drumhead); others, the deep purplish-red (Mammoth Red Rock); some, the round heads (Copenhagen Market); others, the pointed (Early Jersey Wakefield) or flat (Premiut Flat Dutch). We have the best kinds to meet your choice. Some of the midseason and late varieties make excellent kraut; all the late varieties are desirable for fall use and winter storing. Chinese Cabbage may be served like lettuce, cole slaw or cooked like regular cabbage. Drop a whole walnut into the water when cooking cabbage to decrease its typical odor.

6001 Golden Acre -Round

63 days. Has all the wonderful characteristics of our Copenhagen Market, but the heads are a trifle smaller and mature 9 days earlier. They are very uniform, solid, round, 6 in. in diameter, and weigh 3½ to 4 lbs. each—a most satisfactory size for the average family; in quality, they cannot be surpassed. Plants are small and compact, which permits close planting. A valuable extra-early cabbage for the home garden and a profitable one for truckers; extensively grown for shipping.

Very desirable for the home or truck garden; a sure cropper, good shipper and a heavy yielder. Popular in the South for winter shipping to northern markets for which purpose it is extensively used. How to Grow Cabbage

For earliest crop, start early and midseason cabbage seed in hotbed or house; for medium early cabbage, seed may be sown in a cold-frame or open-ground seed-bed in early spring. Sow late cabbage for winter use in a seed-bed outdoors when soil has become warm. A pkt., except O-S Cross, will produce about 250 plants; oz. about 2000 plants. Days to maturity are from the time the plants are set in the garden; allow 30 days to produce plants from seed. Cabbage does best in deep, rich, loamy soil and should be given plenty of water during prolonged dry spells. Space early cabbage plants 18 in. apart in rows 2½ ft. apart; the large midseason and late varieties 2 ft. apart in rows 2½ to 3 ft. apart. Cabbage should never be planted in the same location where it, cauliflower, broccoli, or any of the cabbage family, had been planted the previous year. Healthy, solid heads of late cabbage may be stored for winter use.

5008 Stein's Flat Dutch

83 days. Large flat heads 5½ to 6 in. deep, 8 to 9 in. in diameter and weigh 5½ to 6½ lbs., sometimes more. Good keeper; suitable for home gardens, kraut, and market. Outer leaves are gray-green; interior moderately solid and good quality.

6018 Bonanza ○—Excellent quality

75 days. The outstanding characteristic of this new early-midseason cabbage is that it makes hard heads at all stages of growth. Early in the season, heads are small, firm, almost round, and perfectly uniform, yet will continue to grow and remain hard to reach maximum size, about 6½ in. across and weigh 4 lbs. each. Has a very short core so is quite slow to go to seed. Can be used early to late in the season. If you want a firm, small headed cabbage for home use, market or shipping, especially for long distances, we strongly recommend Bonanza.

CHINESE or CELERY CABBAGE

Not a true cabbage; resembles Cos Lettuce somewhat. May be served like lettuce, or, when shredded, makes a delicious cole slaw. Boiled, it is far more palatable than ordinary cabbage. Adapted to quick freezing. Where summers are cool, seed may be sown in early spring, otherwise sowings should be made about 3 months before your first expected frost. If sown too early, plants will "bolt" during hot weather and not form heads. Packet will sow 25 ft. of row, an oz. 200 ft.

6011 Chihli 73 days. An early, elongated heading Chinese Cabbage, growing 18 to 20 in. tall and about 3 1/2 to 4 in. thick. The firm, well-blanching, white heads taper near the top. Leaves are very crisp and tender; broad, smooth and fringed at the edges. For home and market.

Burpee's CAULIFLOWER

Heads should be used as soon as they fill out, otherwise they will lose in quality and break. Uncooked cauliflower is delicious, when head is broken up into small pieces, chilled, and used as a relish with mayonnaise. Cooked cauliflower is a delectable dish; nice too when used with cucumbers, onions, peppers, etc., in mustard chow-chow. Cauliflower is best grown as a fall crop in the greater part of the U. S., although in regions where summers are cool, sowings may be made indoors 30 to 40 days before time to set plants out in your garden.

Where plants must first be grown, days to maturity given in descriptions are from the time the plants are set in the garden. The time is average and may vary somewhat in different seasons and sections.

6027 Early Snowball—A ©

5205 Burpee's Dry Weather

95 days. Introduced by Burpee in 1899. Though cauliflower does best in a cool and moist season, Dry Weather is drought-resistant and will produce heads when other varieties are a complete failure due to lack of moisture. In addition to this most valuable feature, it is a cauliflower of the highest quality, producing large, pure white heads that weigh 2 to 3 lbs. each. If you have been unsuccessful in getting other cauliflowers to head, try Dry Weather.

Pkt. 30¢; 1/4 oz. \$1.00; 1/2 oz. \$1.90; oz. \$3.70

How to Grow Cauliflower

For a main or fall crop, sow the seed thinly in a specially prepared seed bed or coldframe about 4 months before your first expected frost. Thin out from time to time to allow ample room for development. It is important that cauliflower seedlings are not allowed to become crowded in the plant bed. When plants are ready to be set in the garden, space them 1 1/2 to 2 ft. apart, in rows 2 1/2 to 3 ft. apart. They must always be kept in a healthy growing condition until heads are formed. Any stunting of growth, due to lack of moisture or low fertility, may prove harmful to the crop. A packet will produce about 150 plants; 1 oz. 4000.

WINTER CAULIFLOWER

5199 St. Valentine Broccoli 150 days. Large, solid white heads identical to cauliflower. Too late maturing for general Eastern culture. Recommended as a winter crop, especially in California and other places on the Pacific Coast, where season is long and weather remains cool.

Pkt. 20¢; 1/2 oz. 85¢; oz. \$1.50

Burpee's EGGPLANT

Burpee's Black Beauty
Eggplant

Introduced by
Burpee in 1902

May be cooked in various ways. The fruits are at their best edible stage when the skin has attained a high gloss. Use when young, at which time the seeds will be small and hardly noticeable. Keep fruits picked off as they become ready and plants should bear until frost. A rich, sandy, warm soil produces the best plants and yields the highest number of fruits. Seed should be started in a hotbed, or indoors in shallow boxes or seed-pans, 8 to 9 weeks before the time to set the plants out in the garden. When seedlings are about 3 in. high, plant singly into small pots, setting the plants in the open when all danger of frost is past and the soil has become thoroughly warm. A pkt. of seed will produce about 100 plants; 1 oz. 2000 plants. Days mentioned in descriptions represent the average time required from the setting of the plants in the garden until the first fruits are ready for table use.

6031 Burpee's Black Beauty ◎

73 days. The rich, deep purplish black, smooth fruits retain their color a long time and grow to an enormous size, but may be used while small. When fully developed, they are blunt and broad at the blossom end, weigh several pounds each and are free from spines or thorns. Very productive. Valuable for market and home gardener; suitable for freezing. Tender and tasty at all stages of growth.

Pkt. 25¢; 1/2 oz. 65¢; oz. \$1.05; 1/4 lb. \$3.15

5223 Burpee Hybrid ◎—Excellent

70 days. Introduced by Burpee in 1947. True, first generation (F₁) hybrid of outstanding qualities for home and market gardens. The plant is tall, tree-like, semi-spreading in habit, vigorous and produces continuously many fruits which are oval, medium-sized, and of a good dark purple and high gloss. Most fruits do not touch the ground. More resistant to drought and disease than any commercial variety. Pkt. (30 seeds) 50¢; 2 pkts. 90¢; 3 pkts. \$1.25; 5 pkts. \$2.00; 1/8 oz. \$6.00

5229 Florida Highbush 80 days. Plants are of strong, upright, vigorous, compact growth, and bear many large, elongated, glossy, dark purple fruits tapering toward the stem. The fruits are of good quality, uniform size and held well above the ground. Somewhat resistant to fruit rot and blight. Pkt. 15¢; 1/2 oz. 60¢; oz. \$1.10

85 days. (*Green Flesh*) The variety grown at Rocky Ford, Colorado, under the name of Rocky Ford, is the Netted Gem which Burpee had the distinction of originating and introducing in 1881. A pure Rocky Ford Cantaloupe, when ripe, has a silver-colored netting which is lace-like in appearance. The skin is green, turning to a peculiar gray color when the melons are fit for eating. The flesh is green and so sweet and luscious that it may be eaten close to the rind. Fruits are oval-shaped, firm and solid, weigh $1\frac{1}{2}$ to 2 lbs., slightly ribbed with medium-size seed cavity.

How to Grow Cantaloupes

The most suitable soil is a rich, warm, sandy loam. Sow the seed after the ground has warmed up, putting 8 to 10 seeds in groups, allowing 2 to 3 in. between the seeds and cover with 1 in. of fine soil. The groups should be spaced 4 to 6 ft. apart each way. Thin to 2 or 3 plants to a group after the plants are well established. Well-rotted manure dug into the soil where seeds are to be planted and side dressings of commercial fertilizer after the plants have begun to grow are usually beneficial. A pkt. will plant 12 groups, 1 oz. 50 groups or so-called "hills"—a term that is misleading to many gardeners.

To really enjoy a cantaloupe, fruits should be allowed to fully ripen on the vine for, with the exception of Honey Dew, they do not become sweeter in flavor after being picked. Fruits are ripe when the stem, attached to the melon, will slip from it with a slight touch of the thumb. If the stem does not slip off easily, the melon is not ripe and should remain on the vine. Many persons can select ripe melons by their aroma. We offer the best varieties.

5241 Burpee's Fordhook —Sweet, spicy

85 days. (*Orange Flesh*) **Introduced by Burpee in 1908.** Medium sized, flattened melon 4 in. long, 5 in. across with prominent ribs and broad gray netting. Pkt. 15¢; oz. 50¢; $\frac{1}{4}$ lb. \$1.45

5242 Pride of Fordhook —Extra choice

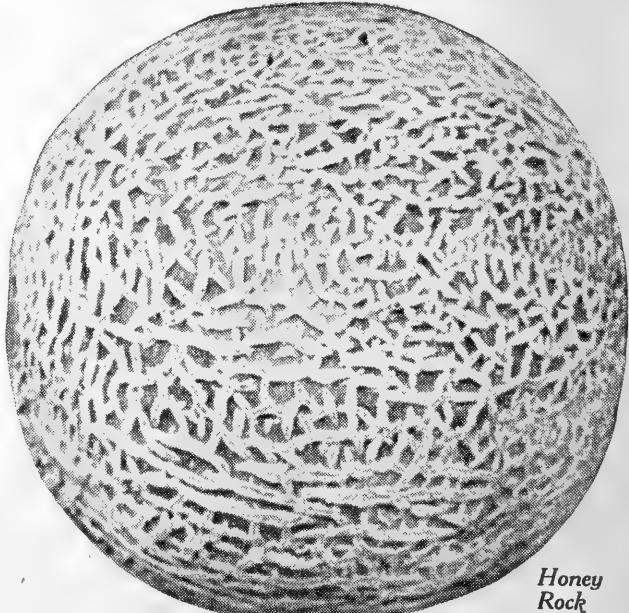

95 days. (*Orange Flesh*) **Created on Burpee's Fordhook Farms in 1943.** The large fruits are oval to nearly round in shape and weigh 4 to 5 lbs. each. Rind is a blue-gray prior to full edible stage, at which time the color changes to a golden yellow. Orange flesh is thick, solid, ripens right down to the rind. Seed cavity is triangular, small and compact. Vigorous.

Pkt. 25¢; oz. 75¢; $\frac{1}{4}$ lb. \$2.25

5037 Pride of Wisconsin —Firm flesh

How to Grow Carrots

Sow seed thinly in early spring in rows not less than 12 in. apart and make additional sowings when the preceding planting is up and growing; allow plenty of time for the last sowing to mature before frost. Cover the seed with ½ in. of fine soil. Thin the small early varieties to stand 2 in. apart in the row and the larger, later varieties from 2 to 3 in. If too crowded, plants will grow slowly so that small, misshapen roots and unsatisfactory yields may be produced. This is especially true of all root crops. Do the thinning while plants are still small so as to disturb the roots of remaining seedlings as little as possible and be sure to firm the soil back around the plants left in the row. A rich, mellow, deeply worked soil gives the finest carrots. The later sowings will produce nice, tender carrots in the fall; these are the best for winter storing or may be used for immediate table use. A pkt. will sow about 30 ft. of row; an oz. about 200 ft.

Burpee's Oxheart

Burpee's CELERY

A most popular vegetable served raw as a relish or cooked in different ways. May be used from the time plants are one-half or two-thirds grown until fully matured. Stalks may be blanched to make them more crisp and tender, although many persons prefer them unblanched, especially Burpee's Fordhook, Giant Pascal, and Utah, all famous green celeries. Some varieties, such as Burpee's Fordhook, are highly desirable for winter storage either where grown and protected from freezing or lifted and put in soil in a cold cellar.

6022 Burpee's Fordhook ◎

130 days. Introduced by Burpee in 1915 and named for Burpee's Fordhook Farms. The best fall and winter celery in existence. Plants are stocky, compact, 15 to 18 in. tall and while comparatively dwarf, they are so solid that they weigh fully 2 lbs. each. Their limited height is of great importance, since the plants are by far more easily blanched than those of the taller varieties. The stalks, after blanching, are a beautiful pure silvery white with a large, tightly folded full heart of the most delicious flavor. Always tender, crisp, without strings, and juicy. An ideal variety for winter storage. We offer our improved strain. **Pkt. 35¢; 2 pkts. 65¢; 1/2 oz. \$1.00; oz. \$1.85; 1/4 lb. \$5.50**

5204 Burpee's Golden Self-Blanching ◎

115 days. First introduced in America by Burpee in 1884. This is the American-grown seed produced from the dwarf French-grown stock. Plants make a compact growth and form thick, ribbed stalks which blanch easily into a beautiful clear waxy yellow. Stalks and heart are tender, solid, free from strings and of the most delicious nutty, crisp and juicy flavor. A very desirable early celery grown extensively by home gardeners as well as market growers.

Pkt. 20¢; 1/2 oz. 80¢; oz. \$1.45

5201 Cornell No. 19 ◎ —Early, self-blanching

120 days. Vigorous, self-blanching, and highly resistant to fusarium yellows. Plants grow 20 to 23 in. tall with thick heart, and long, deeply rounded, fairly smooth stalks. Flesh is thick, tender and without strings. Not only the heart, but the outer stalks as well are delicious to eat. Cornell 19 combines the high quality of the best green celeries with the self-blanching characteristics of Golden Self-Blanching. Recommended as a main-crop yellow celery of the finest quality for home and market in all celery regions and as a midwinter crop in Florida.

Pkt. 25¢; 1/2 oz. 85¢; oz. \$1.60

5202 Utah or Golden Crisp

130 days. Matures about 5 days earlier than Giant Pascal. Plants are compact, stalks broad and thick, exceptionally solid, tender, free from strings and fiber; large, well developed heart, which when blanched, is pure white, crisp, and of the most delicious, nutty flavor. An excellent, high quality, fine flavored green celery for home gardens, market growing, shipping and winter storage.

Pkt. 20¢; 1/2 oz. 80¢; oz. \$1.45

5209 Utah No. 10 B ◎ —Tall growing —

130 days. Slightly taller growing than standard Utah, 26 to 28 in., stocky, erect, compact and full hearted. Stems are 8 to 10½ in. long, thick, rounded and waxy in appearance. Can be readily blanched; tender, crisp, and of excellent quality for home and market; the leading "Pascal" celery for shipment from California. While easily blanched, it is generally used without blanching.

Pkt. 25¢; 1/2 oz. 85¢; oz. \$1.60

How to Grow Celery

For the earliest crop, start the seed in a hotbed or in the house, allowing 10 to 14 weeks to produce plants large enough to set out when weather gets warm. For the fall or main crop, sow seed in the open ground as early in the spring as the soil can be worked into good condition. Cover seed with no more than ¼ in. of fine soil. Celery requires a rich, well-manured soil and plenty of moisture for best results. Soil, boards, or celery paper may be used to blanch the stalks. A pkt. of seed will produce about 400 strong plants; 1 oz. about 7500 plants. Days to maturity are from the time the plants are set out in the garden.

6028 Giant Pascal —Known as Winter King

135 days. Considered by many the standard winter celery. Plants are large, upright and very heavy. Stalks are tall, thick, solid, broad, distinctly ribbed, stringless, tender, crisp, very tasty and of a rich, nutty flavor when earth bleached. After blanching they are an attractive light yellow of superb quality. If properly stored, it will keep in perfect condition throughout the winter months. Whether grown for home or market use, Giant Pascal has always been most popular for its unexcelled table quality.

CELERIAC

(Turnip-Rooted or Knob Celery)

5212 Giant Prague

120 days. The edible portion is the large, thick root, which may be used when it has grown about 2 in. across; fully grown roots may average 4 in. in diameter. Celeriac has a flavor similar to celery and is highly valued boiled or used in vegetable soup, stews, and other dishes. It grows best in a moderately moist yet well-drained soil, which is fairly rich in barnyard manure. Grow as you would celery except that it does not require hilling or blanching. Roots may be stored in moist earth or sand for winter use.

— My garden is rather small and we like cucumbers to eat, for salad and bread and butter pickles. But, the vines, if allowed to run over the ground, take up too much room in a small garden, so I planted a pkt. of the Burpee Hybrid Cucumber seed on top of my compost heap and let the vines climb up an old rose arbor 7 ft. high. I have had a garden for 25 years and I have never seen cucumbers so plentiful. I dare say we picked over 500 cucumbers from the first of July until frost killed the vines. . . .

Ralph E. Birdsall, Millbrook, N. Y.

NOTE: Care should be used in picking cucumbers so as not to injure the vines. Do not yank or pull them off the plant; fruits should be cut from the plants with a small part of the stem attached.

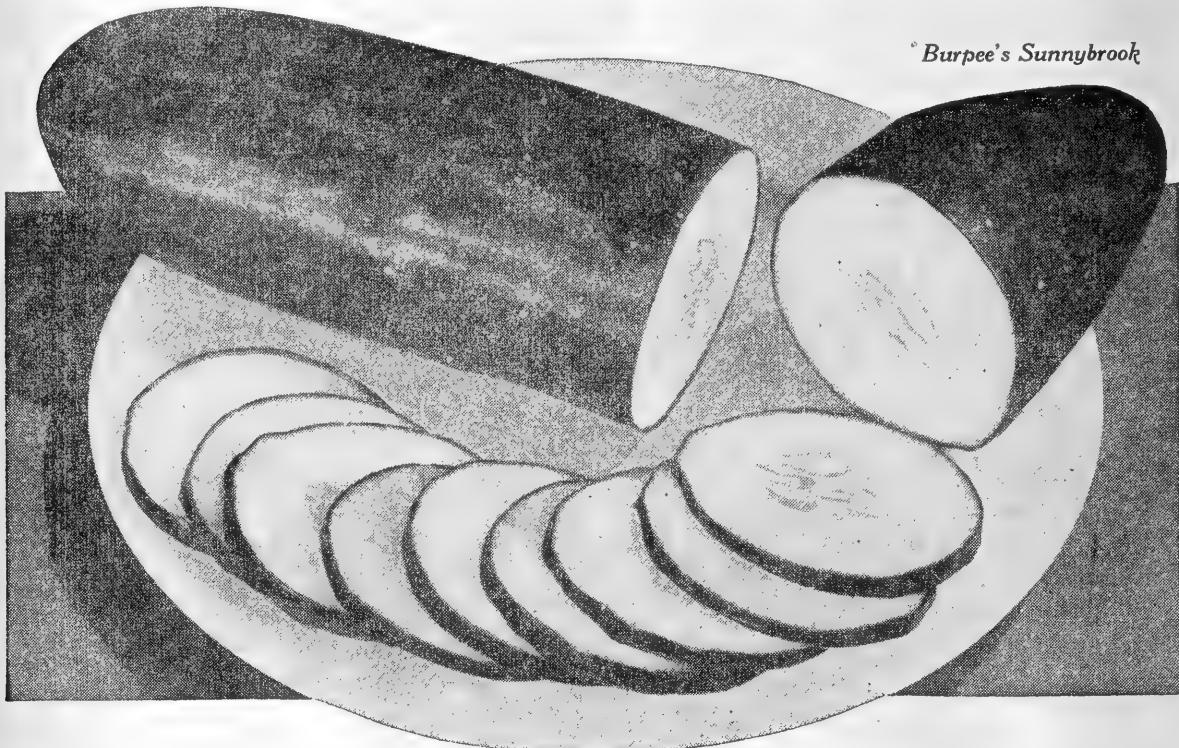

Burpee Hybrid Cucumber (foreground) has such high resistance to mosaic and downy mildew that it outyields the standard varieties (in background) because the vines continue to produce for a long time after others have ceased.

Burpee's CUCUMBERS

May be harvested at almost any age depending on what purpose the fruits are intended. Different sizes may be picked at the same time, small ones for sweet pickles, larger ones for bread and butter pickles, slicing or dill pickles. Many gardeners prefer to plant the larger fruited varieties for table use and the so-called pickling types

and gherkins for relishes or pickles. If you have had poor success with cucumbers, plant Burpee Hybrid listed on the preceding page. Letters from customers all over the country acclaim it as outstanding for yield, quality, color and disease resistance; many tell us we are too modest in our description. It is truly a top-notcher.

Explanation of White Spine and Black Spine

Cucumbers are divided into two families, "White Spine" and "Black Spine." The spines are the miniature stickers that protrude from the warts when fruits are young. White spine cucumbers turn to a creamy white when old; black spine varieties turn to a yellowish orange when matured. Pickling cucumbers, offered on opposite page, are black-spined; all others, with the exception of Improved Long Green, are white-spined.

How to Grow Cucumbers

Make your first sowing of cucumbers after all danger of frost has passed to supply fruits for summer use, and a second sowing 4 or 5 weeks later to furnish cucumbers for fall use and pickling. They succeed best in a fertile, light, well-drained soil. Well-rotted manure or organic matter dug into the soil where seeds are to be planted and side-dressings of commercial fertilizer after the plants have begun to grow are beneficial.

Plant in groups 4 to 5 ft. apart, placing 8 to 10 seeds in each group, and cover with ½ in. of soil. When plants are 6 to 8 in. high, thin to 3 or 4 plants to a group. A pkt. of seed will plant 15 groups; 1 oz. 50 groups or so-called "hills." Seeds may also be sown in rows 4 to 5 ft. apart, 4 to 6 in. apart in the row; later thin the plants to stand 12 in. apart in the row. To save garden space and make for easier gathering, cucumbers may be grown on a fence or trellis.

Burpee's CELTUCE

Combines the uses and flavors of CELERY and LetTUCE

5206 Burpee's Celtnce, introduced by us in 1942, belongs to the lettuce family but is entirely different in its growth and uses. When plants are young, the leaves may be used as lettuce or as boiling "greens," but its chief value is its central stem or stalk. Whether celtnce stalks are to be eaten raw or cooked, you remove the lower leaves and then cut off all the outer skin and fibrous layers down to where they become light green and tender. Cooked celtnce stalks have a pleasing, mild flavor suggestive of celery but different and milder. Truly delicious. Young leaves have four times the vitamin C content of head-lettuce leaves.

Burpee's ONIONS

For flavoring salads, raw or cooked vegetables, soups, sauces, stews, etc., or served as a separate vegetable, onions are universally popular. A large selection of varieties from which to choose—round or flat in shape, mild or fairly strong in flavor, and white, yellow or red colored skin although the flesh of all is white. You may pull green onions as needed before the bulb enlarges or large onions after bulbs are formed. Fully matured onions may be kept for winter storing. Some varieties are better than others for this purpose as explained in the descriptions. **Onion sets are offered on page 122.**

Although onions of this type will not keep as long in storage as Yellow Globe Danvers, Southport, or Ebenezer, Utah Sweet Spanish will stand shipping and storage for short periods better than Prizetaker, Gibraltar or the Bermuda varieties. In northern states, and sections where summers are short, seed is usually started early.

How to Grow Onions from Seed

Sow seed as early in the spring as the ground can be worked, in rows 1 to $1\frac{1}{2}$ ft. apart. Cover the seed lightly. The soil best suited to grow onions is one that is reasonably fertile, well drained, and well prepared. If fully matured onions are wanted, thin the seedlings when 3 to 4 in. tall, to stand sufficiently far apart to develop without touching one another. When the bulbs have reached maturity, bend down the tops to hasten ripening before the onions are harvested. Store in a dry, free-from-frost place over winter. A pkt. of seed will sow about 20 ft. of row; 1 oz. 200 ft. See page 122 for How to Grow Onions from Sets; we offer both the white and yellow.

Why not plant some of each class to supply you with vitamin-rich fresh "greens" throughout the season; canned or frozen for use during the winter? The number of days from sowing the seed until spinach is ready to use applies to spring plantings in vicinity of Philadelphia; this will vary according to locality where and the season when seed is sown.

How to Grow Spinach

Sow seeds very early in the spring, either broadcast or in rows 18 to 24 in. apart; cover the seed with 1 in. of soil and thin plants to stand 5 or 6 in. apart in the rows. At each picking, remove every other plant, which will allow room for remaining plants to fully develop. Additional sowings may be made when the preceding planting is up and growing, but the last should be two months before hot weather is expected. For fall use, sow in late summer; for early spring use, where winters are mild, sow in early fall and cover with a few inches of hay, leaves or litter. A pkt. will sow 25 ft. of row; 1 oz. 75 ft. Directions for growing New Zealand spinach are given on the seed bags.

6091 New Zealand O HOT WEATHER OR EVERLASTING SPINACH

Seeds are large and should be soaked before planting.

Fruits are creamy-yellow and edible from the time they reach a length of 4 to 6 in. until they are 12 to 14 in. long and 3 1/2 in. thick. More easily prepared for the table than curved necked fruits. Heavy yielder of fruits; smaller and earlier than Straightneck Summer. Very productive bush plants. Because of the straight neck, fruits can be more conveniently packed in hampers or crates than the crookneck.

Cocozelle Bush or Italian Vegetable Marrow

Fall and Winter SQUASH

True Hubbard

All, except the Banana squashes, produce hard-shelled fruits which may be stored for use during the winter. Valuable for baking, boiling, making pies, etc. Many of the varieties here listed make excellent "pumpkin" pie and some are canned extensively for that purpose. Unlike summer squashes, fruits of the fall and winter varieties, except Banana, must remain on the vine until fully matured; gather them before frost. Easily stored in any dry place. Keep best if temperature of 70 to 75° F. is maintained for a week or two after which it should be held at 45 to 50° F.

6105 True Hubbard —Excellent quality

115 days. Fairly large fruits with dark bronze-green warted skin, the toughness of which makes it a favorite for shipping and winter use; if properly stored, will keep until spring. 12 in. long and 10 in. thick; weigh about 12 lbs. Attractive deep orange-yellow flesh which is fine-grained, sweet and dry. The standard winter squash for all purposes, whether for freezing, home, market or shipping. We offer our own improved strain; it represents the perfection of winter squashes for pies, baking, boiling, etc.

Pkt. 15¢; oz. 45¢; 1/4 lb. \$1.25

5056 Blue Hubbard 120 days. Attractive blue-gray, slightly ridged fruits which grow larger than the True Hubbard. The shell is rough and very hard, so keeping qualities are good; flesh is bright yellow-orange, fine-grained, dry and exceptionally sweet. Desirable for freezing. Squashes grow 15 to 18 in. long and 9 to 12 in. across; average weight, 15 lbs. Fruits bulge at the middle, tapering sharply at each end; skin is slightly ridged.

Pkt. 15¢; oz. 40¢; 1/4 lb. \$1.20

5312 Red or Golden Hubbard 110 days. Earlier, smaller and more prolific than the green warted Hubbards. 5318 Banana Pink 110 days. Straight, banana-shaped fruits, 20 in. and more long, 6 in. across; grayish green skin turning to pink. Thick, sweet, fine grained, light orange flesh. For home and local market. **Pkt. 15¢; oz. 35¢; 1/4 lb. \$1.00**

5317 Banana Blue 110 days. Similar to Banana Pink but the skin is grayish blue. Because of thin shells, we do not recommend them for winter storage. Delicious flavor. **Pkt. 15¢; oz. 45¢; 1/4 lb. \$1.25**

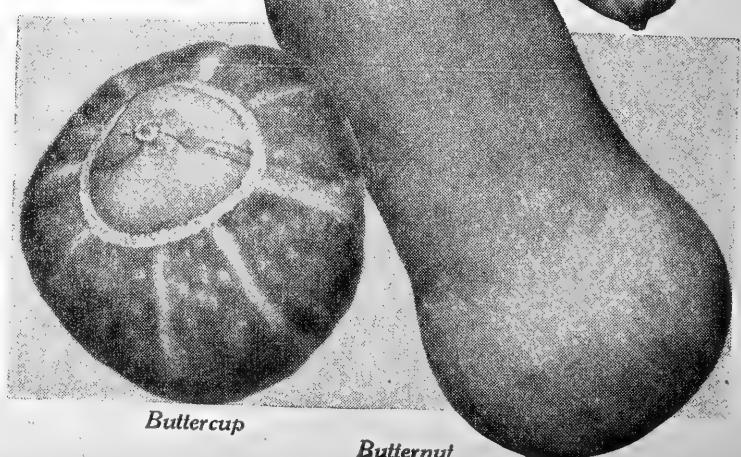

6115 Butternut  85 days. Fruits are 10 to 12 in. long and 4 to 5 in. across; bottle shaped, smooth, dark buff colored skin and a hard shell. The flesh is orange, dry, sweet, fine textured; of excellent flavor. **Pkt. 20¢; oz. 65¢; 1/4 lb. \$1.85**

How to Grow Squash

Summer Squash. Sow seed after all danger of frost has passed. Put 5 seeds in groups, allowing 2 to 3 in. between the seeds and spacing the groups of bush varieties 4 ft. apart each way and those of the running kinds either 8 by 8 ft. or 10 by 12 ft. apart. Thin bush varieties so that 3 or 4 of the strongest plants remain in a group; running varieties allow 2 or 3 plants to a group. They may, like pumpkins, be planted among the corn. Pkt. will plant 8 to 10 groups; an oz. 30 to 40 groups.

Winter Squash. Sow seed in the same way as given above for the running varieties of summer squash; 4 seeds in a group is sufficient. A pkt. will plant 6 to 8 groups; 1 oz. 20 to 30 groups. All varieties of squash grow best in a fertile, deep soil.

SQUASH for Summer Use or Winter Storage

6112 Burpee's Bush Table Queen ◎

80 days. Developed on Fordhook Farms. Fruits are similar in size, shape and color to those of the green fruited Table Queen vine variety, described below; the flesh is of better quality. Plants, however, are of semi-bush growth, produce just as many fruits per plant as the vine variety but take less space in the garden so may be planted closer. Excellent keeper.

Pkt. 25¢; oz. 60¢; 1/4 lb. \$1.75

Fruits may be used before the skin hardens, but the quality of the fine grained, sweet flesh will be better if they are allowed to form a hard shell; splendid for winter storage.

Pkt. 25¢; oz. 60¢; 1/4 lb. \$1.75

Bunching Onions for green scallions; **Leeks**, sweet flavored, thick stems; **Collards**, good boiling green with cabbage-like flavor; **Corn Salad**, well known Lamb's Lettuce; **Mustard Greens**, splendid for salad or cooked like spinach; **Parsley**, a "must" in every garden, for garnishing or dried for use as flavoring; **Spinach**, frosty nights improve the color; **Swiss Chard**, popular for boiling greens as is **Spinach Beet**; **Turnip Greens**, use the foliage variety, leaves have a mild flavor when cooked like spinach.

Remember, too, to provide for **Beets**, **Carrots**, **Turnips**, **Rutabagas** for winter use; they may be pitted in the garden or stored in a cool cellar. **Parsnips** and **Oyster Plant** may be left in the ground and dug whenever you can get into the soil during the winter or leave them for use in early spring.

Keep your garden working. The excellence of a garden consists not in its size, but in the yield and quality of its produce. See that it is well planned and well cared for. Even a small garden is an important addition to the family income and health.

Grow Green Leaf Vegetables for Winter Salads and Cooking

Greens and salads are highly beneficial to health as they are good sources of minerals and are also rich in vitamins. They are easily grown, very palatable, and may be had in a wide range of flavors from the piquant tang of endive to the mild taste of lettuce. Combinations of greens and salads are highly desirable and pleasing.

"Greens" grow best during the cool seasons of the year. In addition to spring plantings, you should plan to sow again in mid- or late summer for fall use or later where winters are not too severe.

Lettuce, the brittle, tender leaves of the crisp and loosehead types; **Endive**, the refreshing flavor of the curled or the tangy taste of the Batavian Escarole; these are the universal favorites. Then, there is **Chinese Cabbage** with its delicate celery-lettuce flavor, and for many weeks after frost you can use the regular Cabbage. Others include **Broccoli**, with its rich green, sprouting heads; **Brussels Sprouts**, whose flavor seems to improve after a light frost as does **Kale**; **Chives**, with its mild onion-like flavor;

FORDHOOK SPINACH or TAMPALA

FOR HOT WEATHER

Amaranthus gangeticus

First introduced in America by Burpee in 1944

Within 6 to 8 weeks from sowing, Fordhook Spinach is ready to use when the entire plants make the most delicious "greens" either raw as a salad or cooked like spinach. As a cooked, canned or quickly frozen green, Fordhook Spinach is, in the opinion of many, superior to regular spinach or Swiss Chard—more appetizing color, flavor more delicious, shrinks very little, holds its color better and is easier to prepare. The young leaves are so tender they require only a few minutes to cook; stems may be cooked like asparagus, their flavor being suggestive of artichokes.

5341 Burpee Fordhook ◎

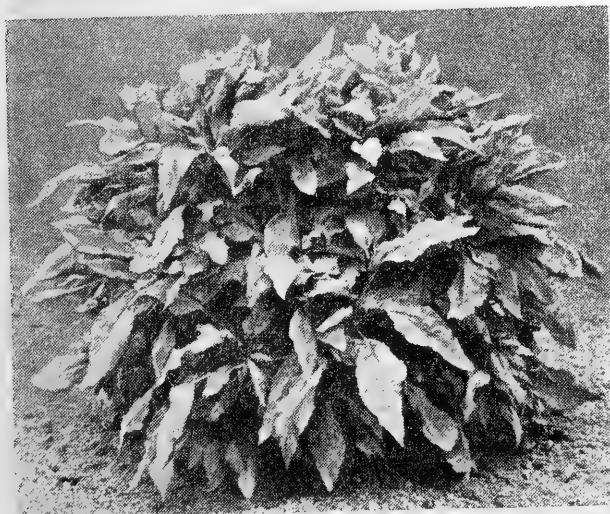

Darkest green-leaved selection of this newly recognized green leafy vegetable which has an unusually long period of usefulness in the summer garden.

Pkt. 25¢; 1/4 oz. \$1.00; oz. \$3.00

5342 Burpee—Light green, tasty leaves

Delicious green vegetable raw or cooked which has been enjoyed by the Chinese and the people of India for centuries. Introduced by us as "Tampala" by which name it is known in India. Leaves are light green in color.

Pkt. 20¢; 1/4 oz. 80¢; oz. \$2.25

Burpee Fordhook—full grown plant

How to Grow Fordhook Spinach

Being a so-called hot-weather plant, seed should not be sown until the soil has become thoroughly warm. Make several successive sowings 10 days to 2 weeks apart and, for the most tender leaves, use entire young plants when 6 to 10 in. high. However, a plant may be left every 2 ft. and leaves picked as they mature.

Burpee's TURNIPS

At their best when growth is made during cool weather. Plant the Extra Early Milan varieties in the spring for their roots and the foliage types for their tops which are much used for "greens." Sow any variety in late summer for fall use or storing of the roots for use during the winter—Purple-Top White Globe being the most popular variety. Frost improves the flavor of foliage turnips.

6121 Purple-Top White Globe ⓠ—Widely grown

Flesh is white, firm, crisp, and of mild-sweet flavor, raw or cooked. Will grow to large size, 4 to 5 in. across but are of best quality if used when 2 to 3 in. in diameter. Very popular for home garden, market, shipping, freezing and winter storing. The leading white fleshed turnip for table use. Heavy cropper.

How to Grow Turnips

Sow the Milan and Foliage varieties in the spring as soon as the soil can be worked; space rows 12 to 15 in. apart. Thin seedlings to stand 2 to 4 in. apart in the row. For succession, make 2 or 3 sowings at two-week intervals. For fall and winter crop, sow any variety in rows or broadcast about 3 months before your first expected hard frost. A pkt. will plant about 50 ft. of row; an oz. 250 ft.

RUTABAGAS or SWEDE TURNIPS

Rutabagas require a longer season to mature than turnips and are best grown as a fall crop. Sow seed from early to late midsummer, in rows 15 to 24 in. apart. Cover with $\frac{1}{2}$ in. of fine soil and thin the seedlings to stand 6 to 8 in. apart in the row. May be stored in a cool cellar or pit and used throughout the winter. Bush LIMA BEANS

Burpee's Fordhook

Easier grown than pole limas as plants do not need support. There are varied sizes and shapes of beans to meet your preference, whether it be the large thick (Burpee's Fordhook) or small thick "potato" type (Baby Fordhook), the large flat (Burpee's Improved) or the small flat baby butter lima (Henderson Bush or the newer Triumph). Some prefer one type for eating fresh, another as dry beans or freezing. We list the best varieties for the different purposes. For eating fresh, pick pods as soon as the beans have reached edible size. For dried beans, pods should be left on the plants until fully matured.

6183 Burpee's Fordhook ◎—Most popular bush lima

Introduced by Burpee in 1907 and named for Burpee's Fordhook Farms.

75 days. The leading variety of bush lima beans for home garden, freezing or commercial use. Pods are 4 to $4\frac{1}{4}$ in. long, 1 to $1\frac{1}{8}$ in. wide, and $\frac{3}{4}$ in. thick, dark green, straight to slightly curved, crowded with 3 or 4 large, thick beans whose dry, mealy quality and delicious flavor, not unlike chestnuts, are familiar to everyone who uses lima beans. Plants are bushy, upright, 20 in. or more in height, with a spread of 2 ft. or more; very vigorous, with many pod-bearing lateral branches. Fine quality, large pods, and always salable, attractive appearance, made Fordhook the universally known large "potato" type bush lima bean for all purposes. Buy from originator.

5093 Fordhook No. 242—All-America Bronze Medal Winner

75 days. Begins to bear about the same time as Burpee's Fordhook. The plants set more pods in cool weather; at high temperatures, there is little difference in yield between the two. Pods grow 3 to 4 in. long, with 3 or 4 thick beans; excellent fresh, canned or frozen.

Pkt. 20¢; $\frac{1}{2}$ lb. 50¢; lb. 85¢; 2 lbs. \$1.60; 5 lbs. \$3.75

Pkt. 15¢; $\frac{1}{2}$ lb. 45¢; lb. 80¢; 2 lbs. \$1.50; 5 lbs. \$3.50

How to Grow Bush Lima Beans

Bush Lima Beans succeed well in almost any good garden soil but do best in a rich, well-drained, sandy loam. As seed is sensitive to cold and wet ground, it must not be planted until the soil has become quite warm and fairly dry. Plant the seeds edgewise, eye down, 4 in. apart in rows $2\frac{1}{2}$ to 3 ft. apart, and cover with 2 in. of fine soil. When the plants are well started, thin to stand 12 in. apart for large-seeded varieties and 8 to 12 in. for small-seeded varieties. Give frequent and shallow cultivation until blossoms appear, but do not cultivate or handle plants when they are wet. A pkt. of large-seeded varieties will sow 15 ft. of row; one lb. 100 ft.; the small-seeded kinds will, of course, go much farther.

Pole LIMA BEANS

Pole Lima Beans mature somewhat later than bush limas and must be given support on which the vines may climb. The yield per sq. ft. of garden space is larger than that for bush limas. Many persons prefer the flavor of pole lima beans to the bush varieties, some like the thick-seeded or "potato" type (Burpee's Best), others the medium-thick (Burpee's Big 6), while others prefer the flat-seeded (Burpee's Giant Podded), some choose the large seeded, others the small; all are good—it's a matter of individual choice and for what purpose intended—to be eaten green, dried, canned or quickly frozen.

6181 Burpee's Big 6 ○—Introduced by Burpee in 1950

88 days. Longest podded pole lima, 6 to 7 in. long, $1\frac{1}{8}$ in. wide with usually 6 large, medium-thick, tender beans of the choicest quality and flavor. Beans have a good green color which is retained to a great extent when cooked. Plants are tall growing, excellent climbers, vigorous, dependable and heavy croppers. We recommend it most highly for home garden, market, canning and freezing. In some sections, customers have reported only 5 beans to a pod. On our farms, Burpee's Big 6 averages one more bean per pod than Giant Podded or King of the Garden and grows about 1 in. longer than either of these varieties.

5121 Burpee's Giant Podded—Introduced by Burpee in 1910

90 days. The largest beans of all pole limas. Pods are $5\frac{1}{2}$ to 6 in. long, $1\frac{1}{4}$ in. wide, with 4 or 5 extra large, oval-flat, green beans of the most delicious flavor; excellent for freezing. Vines are vigorous growing; attain a height of 10 ft. and freely produce their pods in clusters of 4 to 8.

5124 Burpee's Best ○—Introduced by Burpee in 1935

92 days. A pole bean with all the good characteristics of Fordhook Bush—thick seed, rich tenderness, larger pods with three or four times as many on each of the vigorous plants which are strong growing climbers attaining 10 to 12 ft. under average conditions. They produce pods in clusters of 4 to 8 along their entire height. Pods are straight, 4 to $4\frac{3}{4}$ in. long, $1\frac{1}{4}$ in. broad, and $\frac{1}{2}$ to $\frac{3}{4}$ in. through, well filled with 4 or 5 big, plump, "potato" type beans that are exceptionally tender and have a distinctive nutty flavor. Excellent for freezing, shipping, home and market.

5111 Carolina or Sieva—“Butter Bean”

78 days. Pods grow 3 to $3\frac{1}{2}$ in. long, and contain 3 or 4 small, flat, smooth beans of splendid quality. Quick to bear; especially valuable in sections with short summers, where large-seeded varieties are too late to produce well, and in localities with hot summers where pods often fail to set. Grown extensively in the South where it is known as Butter Bean or Small White lima. Vines grow 9 to 10 ft. tall, hardy, vigorous, and heavy yielding. Beans medium green; white when dried.

If picked when young, the markings on the seed will not yet have been developed. Prolific over a long bearing season. Does well under hot and dry weather conditions; popular home garden variety in the South, either in the green shelled or dry bean stage.

How to Grow Pole Lima Beans

Pole Lima Beans are easily grown in any rich, well-drained garden soil. Should be given support, the most frequently used being rough poles, spaced 3 to 4 ft. apart each way. Sow seeds when soil has become warm; put 6 to 8 seeds (preferably with the eyes down) around each pole, cover with 2 in. of fine soil, and firm to assist germination. When plants are well started, thin so that 3 or 4 of the strongest remain to a pole. A pkt. will plant 10 poles; 1 lb. for 50 poles. Small plantings may be made along a fence or trellis, putting several beans 1 ft. apart, later thinning to one strong plant; such plantings would require 1 lb. of seed to about 50 ft. of row; a pkt. will plant about 10 ft. Pole Beans may also be planted the same way.

Stringless Green-Pod BUSH BEANS

Before the introduction of stringless bush beans, green and yellow podded varieties were known as string beans and this name, unfortunately, seems to remain in many localities. Now that strings and tough fiber have been bred out of these varieties, we

are referring to them as snap beans. Take a pod, green or yellow, break it quickly and see how it snaps. Pods are most delicious, raw or cooked, if picked when quite young and tender. They have more vitamins than, are better for you, and, of course, they taste better.

Burpee's Tender Pod Bush Bean

6173 Burpee's Tender Podo

48 days. **Introduced by Burpee in 1941. All-America Bronze Medal Winner.** The most delicate flavored, the most tender and the most succulent bean at all stages of growth. Pods are brittle, fleshy, meaty, stringless, fiberless, $4\frac{1}{2}$ to $5\frac{1}{2}$ in. long, thick, of round, smooth, deep green, and characterized by unusually long, curving tip ends. Of great value for home and market garden, canning and freezing. Matures early and is productive over a long period. Seems to be less affected by adverse weather conditions than most varieties. Seeds are pearly white, with a small red spot on either side of the eye; the red spots do not appear until beans are about matured. If allowed to ripen, the dried, oval-shaped shell beans are of excellent quality for baking or boiling.

How to Grow Bush Snap Beans

Plant seed when danger of frost is past and the soil is warm, in rows 18 to 30 in. apart for hand cultivation or $2\frac{1}{2}$ to 3 ft. apart for field cultivation. Make furrows about 2 in. deep and space the beans 2 to 3 in. apart in the row. Cover with fine soil and firm the soil over the seed with your foot or the back of a rake to insure good germination. When plants are 2 or 3 in. high, thin to stand 4 to 6 in. apart in the row. For a continuous supply of tender pods, make additional sowings when the preceding planting is up and growing; allow plenty of time for the last sowing to bear before frost. Plants grow 15 to 20 in. tall and will bear more pods if you pick them when young at which time they are truly delicious. A pkt. of seed will sow about 25 ft. of row; one lb., 150 ft.

How to Grow Pole Beans

Pole Beans should not be planted until all danger of frost is passed and the soil is warm and moderately dry. They do best if the vines are given support, the most frequently used being rough poles, spaced 3 to 4 ft. apart each way. Place 5 or 6 beans around each pole, cover with 2 in. of soil, and firm to assist germination. When plants are well started, thin so that 3 or 4 of the strongest remain to a pole. A packet of seed is enough for 15 poles, except Scarlet Runner, a pkt. of which is enough for 8 poles. Burpee Golden—plant 3 or 4 seeds to a pole; a pkt. is enough for 12 poles. Pole Beans may also be planted 3 to 5 in. apart along a trellis or fence.

White Marrowfat Bush Shell Beans

BUSH SHELL BEANS

Extensively grown for use as dry beans

Great Northern, Red Kidney, White Marrowfat and Michilite are grown mostly as dried beans for winter use; Dwarf and French Horticultural for green shelled beans, although pods may be used, when young, as snap beans. The bushes are then cut, allowed to dry, and the beans threshed and thoroughly dried out before they are put away for later use. A pkt. will sow about 25 ft. of row; one lb. 150 ft. of row. Many varieties of pole beans, listed on page 101, are also desirable as shell beans.

SWISS CHARD

Leaves are cooked and served like spinach and the mid-ribs like asparagus, or both may be cooked together. Leaf-stalks make delicious fritters. Cutting may be done by removing outer leaves of various plants, thus allowing the center and remaining leaves to grow, or entire plants may be cut off a couple inches above the crown and new leaves will be produced. A healthful and nutritious, easily grown vegetable. Chard stands hot weather and is an abundant, continuous yielder.

6202 Burpee's Rhubarb Chard —Distinct

The leaf-stalks, considered by many as the most delicious part of the chard plant, are bright but delicate, translucent crimson; the rich color extends out through the veins into the dark green, heavily crumpled leaves. Easily grown, thrives everywhere. You will enjoy the different, tasty, delicious flavor of Burpee's rhubarb chard. Vigorous, upright grower. We offer a reselected strain.

How to Grow Swiss Chard

Sow seed any time from early spring until midsummer in rows 18 to 30 in. apart; cover with 1/2 in. of soil. When seedlings are 3 to 4 in. high, thin 8 to 10 in. apart in the row. The plants are quite hardy and will yield throughout the summer and fall until frost. All chards are suitable for freezing. They yield heavily wherever beets can be grown. A pkt. will sow 25 ft. of row; an oz. 100 ft.

MANGELS—For Stock Feeding

Used largely for winter feeding of cattle, sheep, hogs and poultry. Sow seed thinly in early spring in rows 2 to 3 ft. apart; cover with 1/2 in. of soil. Do best in a well-prepared, deep soil of moderate fertility. A packet will sow 25 ft. of row; an oz. 100 ft.; 5 to 6 lbs. per acre.

PEANUTS *Top ranking protein foods*

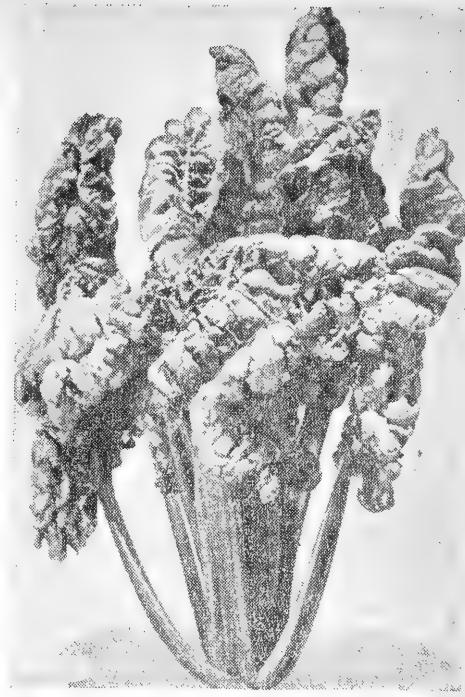

Roasted peanuts, salted peanuts, peanut butter and peanut candies are well known to all of us. Have you ever tried them baked as you would beans? Leave skins on or take them off; they are, however, more palatable if skins are removed.

For best results select warm, light or sandy soil rich in lime. Plant in rows 2 1/2 to 3 ft. apart, spacing the shelled nuts 8 to 10 in. apart in the row, or place them 16 to 18 in. apart in the row if planted in the hulls. Cover with 2 in. of soil. Cultivate and hoe freely. In the fall, before frost, dig and hang vines under a shed or in an airy room to cure. One pkt. will sow from 15 to 25 ft. of row; 1 lb. from 100 to 200 ft. according to method used in planting.

6215 Jumbo Virginia  120 days. Most productive, extra large peanut of rich flavor, with 2 or 3 large, richly flavored kernels to the pod. Vines 3 1/2 ft. across; make valuable fodder for stock. Pkt. 20¢; 1/2 lb. 55¢; 1 lb. \$1.00

Burpee's TABLE BEETS

Burpee's Red Ball—the outstanding round beet for all purposes

6193 Burpee's Red Ball —Excellent

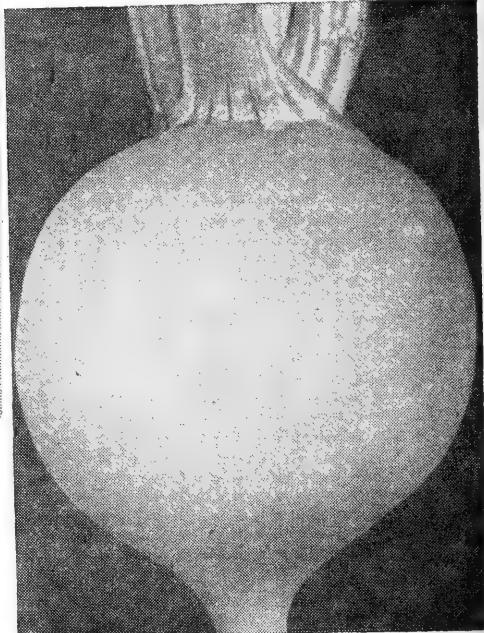

60 days. **Introduced by Burpee in 1904.** Remarkable for its uniform shape, deep colored flesh, and sweet flavor. The roots are globe-shaped, growing to 3 in. in diameter, with smooth, deep red skin and medium-small tap-root. Flesh is tasty, extremely dark red, free from woody fiber, and under good growing conditions, is practically free from lighter colored zones. Its intense dark red color especially fits it for table use. For a market where dark red colored flesh is a primary requirement, for canning, freezing or any commercial use, Red Ball is highly recommended. Medium tall, red and green, erect growing foliage tops. One of the best red beets for the home gardener.

Pkt. 25¢; oz. 55¢; $\frac{1}{4}$ lb. \$1.50; $\frac{1}{2}$ lb. \$2.50; lb. \$4.00

How to Grow Beets

Sow seeds as early in the spring as the ground can be worked. For a continuous supply make additional sowings when the preceding planting is up and growing; allow plenty of time for the last sowing to mature before frost. Space rows $1\frac{1}{2}$ to 2 ft. apart and cover seed with $\frac{1}{2}$ in. of fine soil. A rich, sandy loam, mellow and deep, produces the best shaped and smoothest roots. Thin plants to stand 2 to 3 in. apart in the row. A pkt. of seed will sow $25\frac{1}{2}$ ft. of row; one oz. 100 ft.

Beets are easily grown and are delicious as baby beets when roots are half grown, or they may be used from then on until they reach their full size. Tops are highly palatable when cooked as "greens" or young beets with their tops may be cooked together. Burpee's Red Ball, Detroit Dark Red and Crosby's Egyptian are universally popular. Spinach Beet (Swiss Chard) is grown extensively for the use of its tops as "greens" and its mid-ribs or leaf-stalks as asparagus; we offer the best varieties of Chard on preceding page.

Burpee White—sweetest of all table beets

6196 Burpee White —Distinct

60 days. **Introduced by Burpee in 1952.** Roots are white, top-shaped to nearly round, with a fairly heavy tap-root. Occasionally the roots have a slight pink tint on the shoulders. This coloring is only on the skin, and does not run into the interior flesh, which is pure white, tender, firm, crisp, and entirely without fibers. The quality is excellent, being similar to but sweeter than any red table beet we have ever tasted. Tops are large and vigorous, of a shiny, medium green color; excellent for "greens."

Pkt. 25¢; oz. 60¢; $\frac{1}{4}$ lb. \$1.75

6203 Detroit Dark Red, Short Top

60 days. Widely used round beet for main-crop and fall use whether for table, canning or freezing. Tops average about 3 in. shorter than those of the regular strain, making it suitable for growing on muck or for any use where large tops are not necessary or desirable. Roots are also slightly smaller and more globular. Skin is dark red; flesh is uniform deep red with the zones so inconspicuous that the flesh, when cooked, seems to be one solid ball of deep blood-red; always sweet and tender. Smaller tops allow beets to stand closer together in the row.

Pkt. 20¢; oz. 50¢; $\frac{1}{4}$ lb. \$1.50; $\frac{1}{2}$ lb. \$2.50; lb. \$4.00

6192 Detroit Dark Red, Medium Top

59 days. Beets are perfectly round with deep red skin. They reach $2\frac{1}{2}$ to 3 in. in size and have a small collar and a thin tap-root. The flesh is very dark blood-red, showing hardly any zones. It is tender, fine grained, exceptionally sweet. Medium size foliage makes it popular with housewives wanting plenty of "tops" for use as "greens." Roots are slightly larger than the short top strain offered above. Splendid for the home garden, market, shipping, freezing and canning.

Pkt. 15¢; oz. 45¢; $\frac{1}{4}$ lb. 95¢; $\frac{1}{2}$ lb. \$1.65; lb. \$2.85

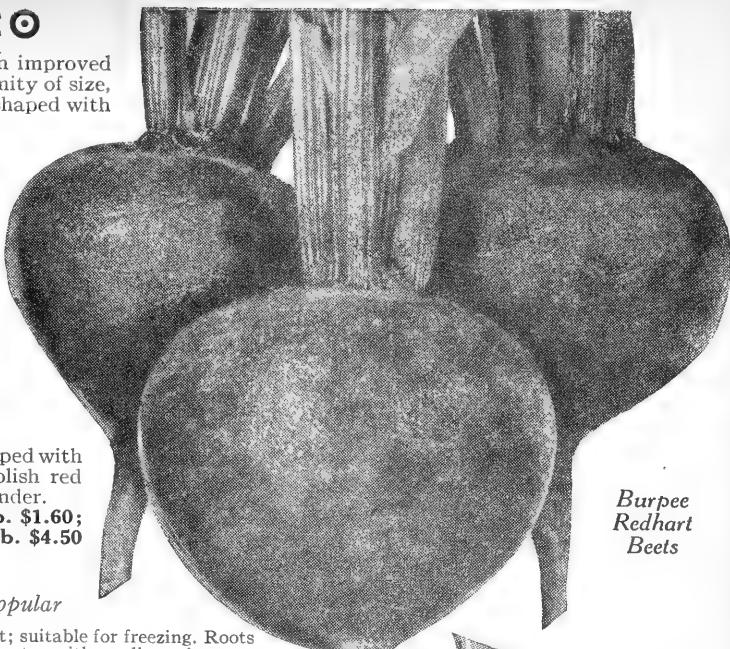

5122 Early Wonder —Valuable for home and market

55 days. Semi-globe-shaped, about 3 in. across, with medium size tops and a thin tap-root. Dark red skin and deep red flesh with slightly lighter zones. Gardeners like this very early beet; its smooth skin and uniform shape commend it to everyone. Popular for canning whole or sliced as well as for pickling.

Hybrid Yellow SWEET CORN

Hybrid Corns are of special value to market growers, canners and to many home gardeners because the ears from one planting mature at about the same time; in addition to this they are noted for their high yield and resistance to Stewart's disease or bacterial wilt. If you prefer to have ears over a long period, plant two or more hybrids of different maturity dates. It is not advisable to save seed from plantings of any hybrids because there will be a reduction in yield the next year. For best results, be sure to get new seed each year, and may we remind you to plant Burpee Seeds, the Best Seeds that Grow.

Stowell's Evergreen Hybrid

To enjoy Sweet Corn at its best, it should be eaten as soon as possible after ears are pulled; any delay causes loss of sweetness and quality. Whether you grow yellow or white grained corn is a matter of preference as is the selection of hybrids or open pollinated, the so-called standard varieties.

Standard Yellow Sweet Corn

Burpee's Golden Bantam

How to Grow Sweet Corn

Plant seed after all danger of frost has passed and the soil has become thoroughly warm, in rows 2½ to 3 ft. apart, spacing the seeds 4 to 6 in. apart in the row; cover with 1 in. of soil and later thin to stand 8 to 12 in. apart. Some prefer to sow 4 seeds in groups, allowing 2 to 3 in. between the seeds and spacing the groups 2 to 3 ft. apart in the row; allow 2 or 3 plants to remain in a group. Corn should be planted in blocks of at least 4 rows side by side rather than in a single long row, to insure pollination and the development of a full set of kernels. A pkt. will plant 4 rows, each about 25 ft. in length; 1 lb. will plant 300 groups or "hills."

6205 Burpee's Golden Bantam ◎ — Known to all

80 days. **Introduced by Burpee in 1902** and deservedly America's favorite sweet corn. The plants are 5 to 6½ ft. tall and the ears are slender, 5½ to 6½ in. long, with 8 and only 8 rows of even, broad, moderately deep, golden kernels of the most delicious flavor. If you want a larger ear, if you want an earlier corn, a more productive one, we have varieties for your needs, but if you want the best and sweetest for your table, it's true 8-rowed Golden Bantam. It is the first real sweet corn demanded in market, and the most popular with the home gardener; highly prized for quick freezing on the cob. **Pkt. 15¢; ½ lb. 40¢; 1 lb. 70¢; 2 lbs. \$1.25; 5 lbs. \$2.95**

5147 Bantam Evergreen — Standard late, large-eared yellow

74 days. Ears 7 in. long, closely set with 10 or 12 rows of attractive golden yellow kernels. Stalks grow 4½ to 5 ft. high, many carrying two ears. 75 days. **Introduced by Burpee in 1927.** Big attractive ear, 6 to 7 in. long, closely set with 12 rows of large, broad, deep, rich golden yellow kernels, full of sweetness and with the same buttery flavor that has given world fame to Burpee's Golden Bantam. Gardeners everywhere praise it highly; its earliness, large size, heavy yield and superior quality have made it a general favorite for home, market and freezing. Upright, vigorous, 5 to 6½ ft. stalks. **Pkt. 25¢; ½ lb. 60¢; 1 lb. \$1.10; 2 lbs. \$2.10; 5 lbs. \$4.95**

DELICIOUS POP CORN

Put 5 or 6 seeds in groups 3 to 4 ft. apart and cover with 1 to 2 in. of soil; later thin out, leaving 3 or 4 stalks to a group. It is profitable to grow your own Pop Corn. A pkt. will plant 75 ft. of row.

Main-Crop PEAS

Dwarf and Tall Growing

6231 Fordhook Wonder ◎

Introduced by Burpee in 1935 and
named for Burpee's Fordhook Farms

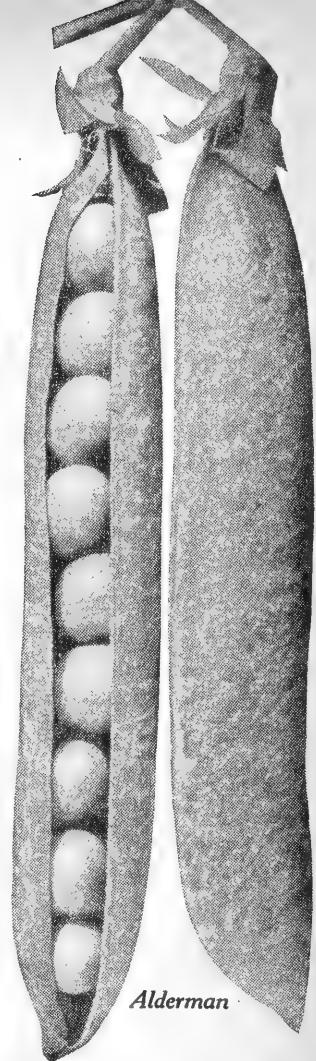

79 days. Extremely large pods, 5 to 5½ in. long, nearly round, dark green, and contain up to 10 extra-large peas that are sweet and most delicious. Quality is excellent; very good for freezing. For a main-crop home garden pea, or for markets where size of pods is important, we recommend Fordhook Wonder for any section where late peas do well. Plants are very vigorous, productive, dark green, coarse, 28 in. tall; peas are of the finest flavor and they retain their sweetness for an unusually long time after the pods are ready to pick. Valuable for shipping.
Pkt. 25¢; ½ lb. 55¢; lb. 95¢; 2 lbs. \$1.80; 5 lbs. \$4.25

5174 Alderman or Tall Dark Podded Telephone

74 days. Depending upon growing conditions, vines grow 4½ to 6 ft. tall and require support. Very productive over a long bearing season. Pods 4½ to 5 in. and more in length, straight, pointed; well filled with 8 to 10 extra-large, extra-sweet peas which hold their green color well in cooking. An ideal, high quality pea of unsurpassed flavor for home, market, shipping and freezing. Does best in cooler regions as do all the largest podded varieties.

Pkt. 15¢; ½ lb. 40¢; lb. 70¢; 2 lbs. \$1.30; 5 lbs. \$3.00

5181 Carter's Daisy or Dwarf Telephone — Sweet, tender peas

79 days. Vines grow about 24 in. tall, are stout and invariably bear a good crop of attractive large pods, 4½ in. long, broad, slightly curved, and pointed, each containing 7 to 9 large, round, luscious peas. A standard market variety and popular medium-tall, large-podded pea for the home garden as the vines are short and bushy enough not to require support. Suitable for quick freezing as the large, bright green peas hold their tenderness well.

How to Grow Peas

Peas make their best growth during cool weather so that the first planting of seed should be made as early in the spring as the soil can be worked. Sow an early variety two or three times at 10-day intervals or choose from the smooth-seeded early, wrinkled-seeded early and main-crop varieties. Sow again in late summer for a fall crop. Planting space available more or less governs the number of sowings and the choice between tall and dwarf varieties. Peas are usually planted in double rows 3 in. apart, the seeds dropped 2 in. apart and covered with 1 to 2 in. of soil. Double rows should be spaced about 2½ ft. apart. For best results, provide supports (wire, brush or string) for the tall-growing varieties to climb upon. A pkt. will sow 20 ft. of single row; 1 lb. 100 ft.

Early Peas—Smooth-Seeded

Smooth-seeded peas are valuable for earliest crop, high yield and general hardiness. Seeds should be sown as early in the spring as ground can be worked as they do best when soil and weather are cool. Dwarf and medium-tall.

5162 Mammoth Podded Extra Early ◎ — Medium-tall grower

60 days. Valuable large-podded, smooth-seeded, extra-early pea, adapted to home and market because of early maturity and large yields. Pods are broad, round, blunt, 3 in. long, medium green and contain 6 to 8 large peas of fine quality. Vines grow 30 in. high and freely produce their pods for a number of days. Such large pods and tall vines are usually found in later maturing varieties. Young, fresh peas are truly delicious. Pods taper slightly from blossom to stem end.

5165 Alaska — Resistant to wilt

55 days. Also known as Earliest of All. Standard, popular, extra-early smooth-seeded pea for home, market and canning; of value, too, where summers are short. Vines are 2½ ft. tall, slender, unbranched, with very light green, rather thin leaves. Pods grow 2½ in. long, round, plump, light green, blunt ended and tightly packed with 6 to 8 small round green peas. Resistant to fusarium wilt.

Pkt. 15¢; ½ lb. 40¢;
lb. 70¢; 2 lbs. \$1.30; 5 lbs. \$3.00

5164 Radio ◎ — Ideal dwarf early

58 days. Great favorite. The plants make a vigorous bush, 12 to 15 in. high, and in less than two months the vines are simply loaded with well-filled dark green pods, 2½ in. long, which, on the average, contain 6 large, round, bright green peas, the flavor of which is rich and sweet.

Early Wrinkled-Seeded PEAS

Burpeeana Early — Note the heavy yield of well-filled pods

Wrinkled-seeded peas, both early and main crop varieties, are favored by many for home and market growing, quick freezing and canning, because of their extra sweetness and better quality. Contrary to popular belief, they can be planted as early as smooth-seeded varieties—as soon as soil can be prepared, but do not sow in cold, wet ground. They grow best when weather is cool.

6222 Burpeeana Early ⓠ — *Highest quality*

63 days. **Introduced by Burpee in 1949.** Burpee's extremely prolific, early, dwarf pea for the home garden, market grower, shipper, canning and freezing. Vines grow 18 to 24 in. tall and bear many pods, 3 to 3 1/4 in. long, straight, slightly curved at tip and tightly filled with 8 to 10 medium to large size, sweet, tender peas of excellent quality. Retain color and flavor when quick frozen. Gardeners throughout the country have written us most favorably of the excellent results they have obtained with this wonderful pea. It is a "must" for your garden; try it.

6221 Thos. Laxton ⓠ — *Choice quality; heavy yielder*

65 days. Plants grow 2 1/2 to 3 ft. in height. Pods are 3 1/2 in. long, broad, straight, well-filled, dark green and have square ends. Each pod contains 7 to 9 large, tender peas of the very finest flavor. An early high quality, all-purpose pea for home or market. Always a heavy cropper; in some seasons in the East it usually outyields many of the larger podded varieties. Highly recommended for freezing, as well as shipping, and used to some extent in certain sections as a canning pea. Its adaptability to grow under widely different conditions is truly marvelous and adds so much to its popularity.

The dark green vines grow 15 to 18 in. tall and produce a heavy crop of large, straight, pointed, deep green pods, 4 1/4 in. long. Each pod contains 7 or 8 large, sweet, tender, dark green peas of high quality and much larger in size than other dwarf-growing early varieties. Best known of all large-podded early wrinkled peas; pods retain color a long time.

5182 Laxton's Progress — *Largest pods of the Laxtonians*

62 days. Pods 4 1/2 in. long, broad, pointed, deep green, each with 7 to 9 large, luscious, dark green peas. Vines 18 in. tall. Popular for home gardens, freezing and although it is a dwarf grower, the pods are large enough to make it a profitable market variety. Laxton's Progress has real merit; it is productive, dependable and the sweet, tender peas are of exceptionally good quality.

EDIBLE-PODDED or SUGAR PEAS

THE PODS ARE COOKED AND EATEN LIKE SNAP BEANS

Sugar Peas possess the tenderness and fleshy podded qualities of a snap bean and the flavor and sweetness of fresh green peas. When young the pods are cooked like snap beans; the peas are not shelled. At this stage, pods are stringless, brittle and succulent. Should pods develop too fast for use as snap beans, seeds may be eaten as shelled peas and are of the best flavor before they have reached full size. The following varieties are entirely free of fiber or parchment. Vines of the taller growing Mammoth Melting Sugar Pea should be given support of string or brush to climb upon for best results.

5184 Mammoth Melting Sugar ◎ 75 days. Well-known, productive and resistant to fusarium wilt. The fleshy, tender, 4 to 4 1/2 in. pods are light green, sometimes twisted, broad and blunt-ended, stringless, sweet and delicious. Pods are often sliced for cooking. The dried seed is large and white. Most widely used variety for home gardens; grown for market in some sections. Vines grow 4 to 4 1/2 ft. tall and produce a heavy crop.

Pkt. 20¢; 1/2 lb. 45¢; lb. 80¢; 2 lbs. \$1.40; 5 lbs. \$3.25

5183 Dwarf Gray Sugar 65 days. The earliest and dwarfest growing sugar pea. Pods 2 1/2 to 3 in. long, light green, curved, sweet and tender. Vines grow 2 to 2 1/2 ft. tall and are very prolific. Because of its dwarf habit, Gray Sugar is ideal for home gardens, especially where space is limited and seasons are short. Dried seed is small and mottled reddish gray.

HARDY AMARYLLIS

Lycoris squamigera

7648 Halli Leaves produced in early spring ripen and disappear in June or July. About a month later, as if by magic, stalks 2 to 3 ft. tall appear crowned with a whorl of 8 to 12 lavender-pink, lily-like flowers. Because of its unique habit of growth, it is often referred to as the Magic or Mystery Lily. For outdoor planting only. Nice for cutting. Hardy amaryllis do well in any good, well-drained garden soil, in a sunny location. Plant bulbs not less than 10 in. apart and cover firmly with 5 in. of soil. When the plant is in foliage, we suggest that you place a marker near it so that when the leaves die off, the flowering stems will not be injured by cultivation.

Burpee's Hardy Garden LILIES

Easy to grow in any good, well-drained garden loam to which has been added a generous quantity of leaf mold. Once established, they will increase in beauty each year. Most all lilies delight in a sunny location, but it is advisable to mulch so that the hot sun does not reach the soil around the base of the plant. All varieties offered are highly decorative in the border, while the dwarfers also give a charming touch of beauty to the rock garden. Lily bulbs differ greatly in size according to variety—some 1 in. across, others 3 in. or more; we supply the sizes which will give the best results. We do not recommend Hardy Lily bulbs for house culture. How-to-grow directions are sent with the bulbs. You may order 6 bulbs or more of the same variety at the 12 rate.

7261 Gloriosa Lily LILY ROTHSCHILDIANA

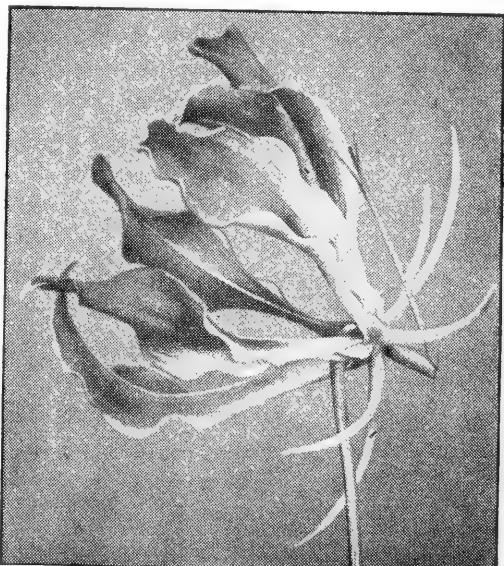

A most unusual and fascinating garden lily in that it will climb if it has something nearby to which it may attach itself. Leaves are elongated, soft green with curling tendrils on the tips with which they cling to a fence, trellis, string or wire.

Lily Rothschildiana is exotic in color and shape. The petals are sharply recurved, brilliant red bordered golden yellow—a striking bicolor contrast, the red becoming darker as flowers age. Planted in full sun, the colorings are more brilliant but plants become stockier, shorter and the stems of less length. Blooms have remarkable keeping qualities so make wonderful cut flowers. They also make attractive pot plants.

Roots are entirely unlike any of the other lilies—they do not have scales but are somewhat like a small dahlia tuber, 4 to 6 in. long and a trifle thicker than a lead pencil. Plant in a horizontal position, 4 to 5 in. deep in full sun or semi-shade. They do best in a sandy soil, preferably on the acid side; it is essential that any soil in which tubers are planted be well drained. Not hardy except in frost-free sections.

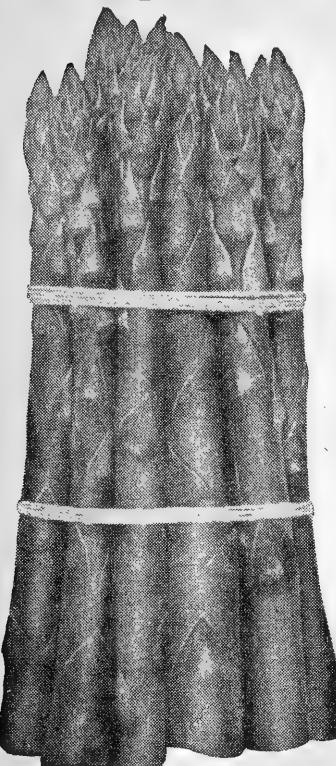

This unique and interesting lily is a species discovered in East Africa. Early records show it was grown on the estate of the Hon. Walter Rothschild of England, for whom it was named.

This beautiful lawn on Fordhook Farms was produced from Burpee's Fordhook Finest Lawn Grass Seed

Burpee's Lawn Grass Seed

The best time to start your lawn, or to repair it, is during the cool weather of early spring or in early fall. The weather at these times is favorable for the development of domestic grass but unfavorable for most weeds and wild annual grasses. Why not plan now to

have a luxuriant lawn that will add so much to the beauty of your home? The Burpee leaflet, "L 20—How to Establish a Lawn," will be sent free upon your request. For new lawns, sow 1 lb. of grass seed to 200 sq. ft. of space; use 100 to 150 lbs. per acre.

Burpeeana Early Asters

New, extra early, long stem asters created by Burpee

Burpeeana Early Asters are particularly noteworthy because of their desirable, uniformly upright, compact habit of growth; also because they bloom extremely early.

Burpeeana Early Asters, in many localities, come into full bloom before aster wilt or aster yellows may make their appearance. In our plantings, these new asters reached the peak of their bloom two weeks or more earlier than Queen of the Market, with larger and better shaped flowers and longer, stronger stems. Ideally suited for cutting and garden.

Burpeeana Early flowers are globular, double, 3 to 4 in. across, with attractively incurved petals somewhat resembling the American Beauty aster in shape. They range from snowy white through shell-pink, rose, crimson, blue, violet to purple—practically all colors known in annual asters.

Seed crop very short; order early.

1/16 oz. \$1.00; 1/8 oz. \$1.85

Other Asters, pages 8 to 11

Burpeeana Early Aster plants are of erect, base branching growth (see picture below), average 20 in. in height, with many stems per plant. Each stem is unusually strong and topped with a flower of splendid form and substance. These terminal flowers come into bloom at about the same time, thus making a grand showing in the garden. The sturdy, upright plants permit close planting so that more can be grown in a given area.

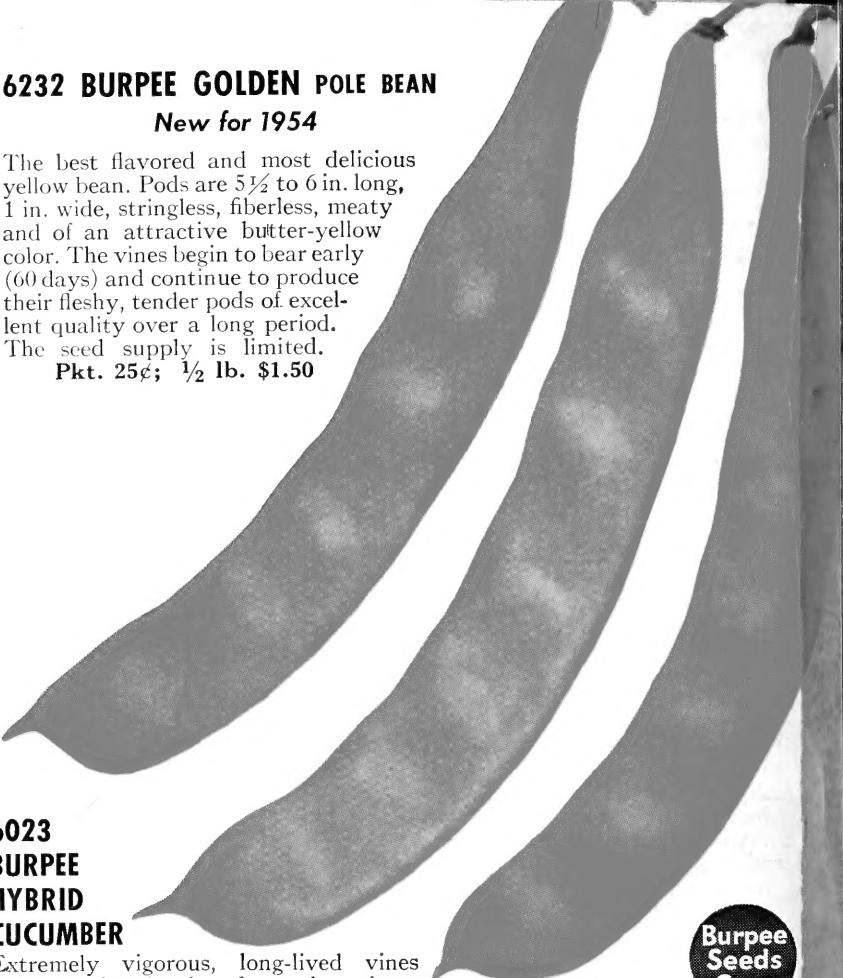

6232 BURPEE GOLDEN POLE BEAN New for 1954

The vines begin to bear early (60 days) and continue to produce their fleshy, tender pods of excellent quality over a long period.

The seed supply is limited.

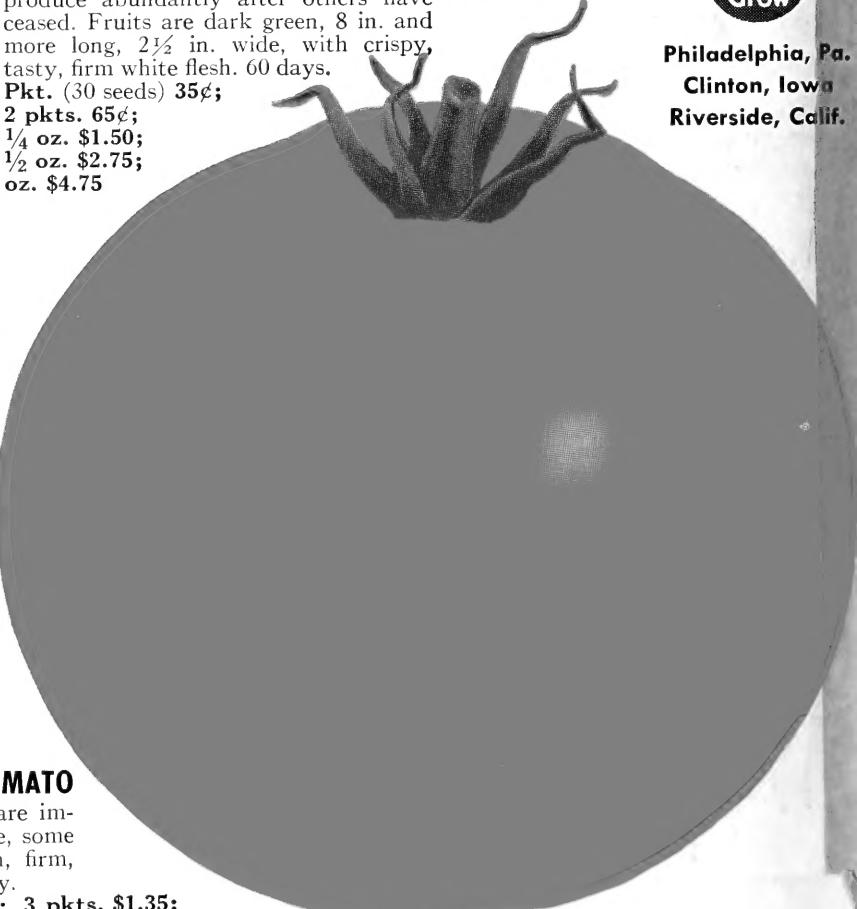

Pkt. 25¢; $\frac{1}{2}$ lb. \$1.50

6023 BURPEE HYBRID CUCUMBER

Extremely vigorous, long-lived vines produce abundantly after others have ceased. Fruits are dark green, 8 in. and more long, $2\frac{1}{2}$ in. wide, with crispy, tasty, firm white flesh. 60 days.
